FINAL CUT PRO · QUICK SETUP

Kollosche style subtitles for reels

Clean white captions that fade in word by word, with no background box. Four steps: generate the subtitles, set the caption settings, set the font styling, then check every word. Match the numbers below exactly.

1 Generate the captions

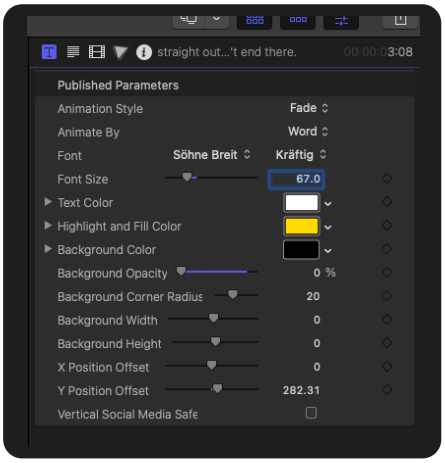

In the timeline, right click your video clip, then go to **Generate Captions → Subtitles**. Final Cut transcribes the audio into a subtitle lane above the clip.

Right click	**Video clip**
Menu	**Generate Captions**
Choose	**Subtitles**

2 Set the subtitle settings

Select the subtitles, open the **Title Inspector** and set the Published Parameters to these values.

Animation Style	**Fade**
Animate By	**Word**
Font	**Söhne Breit, Kräftig**
Font Size	**67**
Text Colour	**White**
Background Opacity	**0% (no box)**
X Position Offset	**0**
Y Position Offset	**282.31**
Vertical Social Safe	**Off**

3 Set the font styling

Switch to the **Text Inspector** and set the **Basic** section to match.

Font	**Söhne Breit, Kräftig**
Font Size	**67**
Alignment	**Centre**
Vertical Alignment	**Bottom**
Line Spacing	**6**
Tracking	**0%**
Baseline	**0**
All Caps	**Off**
All Caps Size	**80%**

4 Final check: watch the whole thing

Play the reel from start to finish with sound on before you export. Check every caption for spelling mistakes, names and brand terms spelt correctly, and words that match exactly what the person says. Make sure each word appears in time with their voice. Double click any caption to fix the text.

Before you start

- **Install Söhne Breit** (Klim Type Foundry) on your Mac first. Kräftig is the bold weight. Without it, Final Cut swaps in a default font.
- Make sure all the subtitles are selected when you change the settings, so every caption gets the same look.
