LRGR THAN LIFE APPAREL

Proof over promises.

Twelve video ideas, the six we'd shoot first, and how the shoot day runs.

PREPARED FOR	PREPARED BY	FORMAT	DATE
Shak	**10x Visuals**	**Reels, TikTok, Shorts**	**October 2026**

THE APPROACH

Let people see it, not hear it.

Every idea here is built so the viewer finds something out by watching: a pick made with the logos hidden, a count, a guess you can get wrong, a hat that gets worn for real. You're the person reacting, deciding and calling it, not reading lines.

Logos hidden where it matters

In the comparison videos nobody knows which hat is yours until the reveal. That's what makes the result believable.

Results go out as filmed

If a pick, a count or a guess doesn't go our way, it still posts. You sign off on that before we lock anything.

Nobody gets lines

Participants get neutral questions only. Your opening lines are starting points; say them your way or not at all.

Small tests called small

One person, one day, informal. Every hat is set the way its wearer likes it, on camera.

THE TWELVE

At a glance.

#	TITLE	PILLAR	MECHANISM	LENGTH	DIFFICULTY
1	**Red or Blue?**	Side by Side	Blind pick from the front, the side as the turn, a vote, the reveal in Part 2	25–35s + 20–30s	Medium
2	**Ours Or Not?**	Side by Side	Founder picks his own hat by touch on a fixed escalation; the viewer knows first	40–50s	Low
3	**The One I Knocked Back**	Side by Side	A participant spots the difference, then "Would you have noticed?"	30–45s	Low (needs a real sample)
4	**The Tug Count**	The Hat Test	Running tally in A-B-B-A blocks; the viewer knows the hats, the counters don't	30–45s	Medium
5	**In The Bag**	The Hat Test	Before and after one real bag, overlay wipe	20–30s	Low
6	**What Goes First?**	The Hat Test	Two predictions shown and sealed, a sealed twin, opened at wear 30	Ep. 0 12–20s	Low on the day, medium overall
7	**The Drawer Hat**	Built For Us	A specific guess before the story, one fix, the owner's call	60–90s	Low
8	**Shak's Bet**	Built For Us	Hidden bet on who won't want it, then a live disagreement	45–60s	Low–medium
9	**Will It Do Up?**	Built For Us	The tape's call against where each person sets the strap, scored	40–60s	Medium
10	**Mark It Up**	Built For Us	Three strips on his own hat, then a wearer's three	35–50s	Low
11	**Can't Unsee It**	Built For Us	10-second spot-it loop on Shak's pet hates, LRGR hats in the pool	8–12s	Low
12	**Shape First**	Built For Us	Silhouette row lit in release order, new one last	8–15s	Medium

01 Red or Blue?

PILLAR

Side by Side Comparison

THE QUESTION

With the logos hidden, which hat would you wear? And does seeing the side change the answer the front gave?

HOW IT WORKS

A blind pick with a turn, across two posts.

- Both hats get identical grey tape over the front panel, plus a red or a blue dot.
- The viewer and the wearer pick from the front first. Then the locked side and back views land, and the wearer is asked again.
- Part 1 resolves the wearer's turn and ends on the viewers' vote. Part 2 takes the tape off.

> FIRST TWO SECONDS
>
> A stacked 9:16 split, front-on: the same face twice, in two caps with matching grey tape over the fronts, a red dot on one tape and a blue dot on the other. On screen: “Red or blue?” No voice.

> OPENING LINE
>
> **None from Shak. The first words heard are the producer's prompt to the wearer, off camera: “Which one would you actually wear out?”**

PAYOFF

Part 1: whether the side changed the wearer's pick. Part 2: which one was LRGR, and how Shak takes a pick that may not be his. If the wearer and the vote both land on the other hat, that's the post.

WHY PEOPLE WATCH

You pick before the turn and before the brand. The logos are hidden, so the brand doesn't steer the pick, though anyone who already knows the A-frame's shape may still recognise it. It tests the proposal's central idea (“Show the side, not the front”) instead of asserting it, and it might not hold. Part 2 is also where Shak responds to someone whose preference may differ from his.

DIFFICULTY

Medium.

02 Ours Or Not?

PILLAR

Side by Side Comparison

THE QUESTION

Could the person behind this hat pick it out without looking? And what is he actually feeling for?

HOW IT WORKS

A feel box, with the viewer one step ahead of Shak.

- The cardboard box has its back cut away towards the camera. Shak's hands come in through two holes on the far side.
- A hat slides in. The viewer sees it, and an on-screen tag gives them the answer before Shak calls “ours” or “not ours”.
- A coin toss decides each round and hats can repeat, so he can't count his way to the answer.
- Six rounds that get harder on a fixed schedule, scored against luck. Six from six by guessing is 1 in 64. Five or better is about 1 in 9.

> FIRST TWO SECONDS
>
> Front-on: a plain box on a table, its open back facing the lens. Two hands push in through holes on the far side as a cap slides in from the left. A small tag above it reads “LRGR” or “NOT”.

> OPENING LINE
>
> **“Mix 'em up. I've just got to say if it's one of ours.”**

PAYOFF

The score against chance, and the one detail his hands relied on, found blind rather than claimed. A miss gets shown.

WHY PEOPLE WATCH

You know the answer while he doesn't, so every hesitation and wrong call lands. The founder can fail on his own channel, and the fixed schedule means the last rounds are the hardest whether he's winning or not. What he feels for is something you can check by hand in a shop.

DIFFICULTY

Low.

03 The One I Knocked Back

PILLAR

Side by Side Comparison (with a Built For Us decision behind it)

THE QUESTION

Can you even see the thing he was fussy about? And would a buyer have cared?

HOW IT WORKS

A participant spots the difference, then gives an honest answer.

- Two near-identical hats, with no markings.
- A participant tries to find what changed, and the viewer looks along with them.
- Shak shows the difference, with the evidence.
- Then he asks “Would you have noticed?” and has to respond to whatever comes back.

> FIRST TWO SECONDS
>
> Close on the participant's hands turning both hats over on a plain surface, with no tape and no markings. Off screen, Shak: “One of these I sent back.”

> OPENING LINE
>
> **(Shak, off screen) “One of these I sent back.”**

PAYOFF

The difference, proof that it happened, and the clash or agreement between his standard and a buyer's answer. A flat “no” stays in, and his response to it is the ending.

WHY PEOPLE WATCH

You look for it alongside the participant, then watch a founder defend being fussy to someone who might not care.

DIFFICULTY

Low, if the sample exists.

04 The Tug Count

PILLAR

The Hat Test

THE QUESTION

How often do you reach up to fix your cap without noticing? The research describes people who keep pulling their caps down. This counts it for one person instead of claiming it.

HOW IT WORKS

A running tally where the viewer knows which hat is which, and the wearer and the official counter don't.

- Four 15-minute blocks of something the wearer genuinely does, filmed on one locked wide in the order A-B-B-A, so neither hat always gets the later slot. A coin toss decides which hat is A.
- Both hats stay taped, tagged “1” and “2”.
- The LRGR helper clicks live, for the sound and the picture. The helper knows which hat is which, so the live count isn't the official one.
- Afterwards, someone who has never seen LRGR hats, this brief or the hypothesis recounts from the footage. That's the official number.
- The viewer sees the hats labelled from the first block. There's no brand reveal.

> FIRST TWO SECONDS
>
> Captured live in block 1 on a second phone locked over the clicker's shoulder: the tally counter sharp in the foreground, the wearer soft behind. A hand goes up to the hat and the thumb clicks, loud in the mix. If block 1 doesn't give a clean moment, open on the locked wide with the click audible and a counter overlay. No re-enacted tugs.

> OPENING LINE
>
> **(Shak to the wearer, at the start of block 1) “Every time you touch it, that's a click.”**

PAYOFF

Four raw numbers against the margin set in advance, whichever way they fall. A difference inside the margin is a draw. On screen: “One person, one hour, informal.”

WHY PEOPLE WATCH

It's a scoreboard you can count along with. You know which hat is which, and the wearer and the person who did the official count don't. It also puts the wearer's Red or Blue? pick next to what their hands actually did.

DIFFICULTY

Medium.

05 In The Bag

PILLAR

The Hat Test

THE QUESTION

Can I take my cap off, shove it in my bag and get the same hat back out? (Creative hypothesis: caps spend a lot of their life off the head.)

HOW IT WORKS

A before-and-after through one real bag, compared with an overlay wipe.

- Two new hats (LRGR and a second copy of the comparison cap) are shot on a gridded board from fixed positions.
- The bag's owner packs both their normal way. Halfway through, they swap the two hats' places.
- At the end, the hats come out onto the same marks, and the edit wipes the after frame over the before.
- Ten minutes later, there's one more frame, with the hats untouched.

> FIRST TWO SECONDS
>
> Overhead: two caps on a gridded cutting mat beside the owner's open bag. The owner's hand picks one up and packs it into their own bag the way they normally do.

> OPENING LINE
>
> **(to the bag's owner) “Pack them how you normally would.”**

PAYOFF

A dent, a crease or nothing, and whether it comes back. LRGR may come out worse, and that stays in.

WHY PEOPLE WATCH

The wipe answers the question in a second. It uses the owner's real bag and their real way of packing, not a lab stunt.

DIFFICULTY

Low.

06 What Goes First?

PILLAR

The Hat Test

THE QUESTION

Which part of a cap gives out first when you actually wear it? And does the person behind it know?

HOW IT WORKS

A bet in plain view, with an untouched control hat.

- Two hats from one confirmed batch. One is sealed in a box with Shak's signature across the tape. The other is worn for 30 logged wears.
- Shak and the wearer each write down what they think goes first, and roughly when, and read it to camera. The cards go on screen, then into an envelope taped to the box. The envelope locks the predictions in. It doesn't hide them, so the viewer can take a side.
- Checkpoints at wears 10 and 20.
- At wear 30, the box is cut open, the twins go side by side under the Ep. 0 setups, and the envelope is opened.

> FIRST TWO SECONDS
>
> A two-shot: Shak and the wearer on either side of a taped, signed box, each holding a card up to the camera. On screen: “WEAR 0 / 30”.

> OPENING LINE
>
> **“That's mine. No changing it at thirty.”**

PAYOFF

Ep. 0's payoff is the bet itself, out in the open. At wear 30: a worn hat next to its untouched twin, and whose call was right. No visible change is also a result.

WHY PEOPLE WATCH

Two calls you can see and side with, and a counter that moves. The finale compares against a hat you watched get sealed, not a memory of day one.

DIFFICULTY

Low on the day (about 45 minutes).

07 The Drawer Hat

PILLAR

Streetwear Built For Us

THE QUESTION

HOW IT WORKS

A specific call before the evidence, then one fix.

- The owner puts on a hat they stopped wearing. Shak looks it over and writes one specific guess on a card before they say a word.
- The card flips, and the owner gives the real reason.
- Shak gets one fix without swapping the hat: the strap, how it's seated, the angle, or the brim (with permission).
- The owner decides where it goes: back on their head or back in the drawer.

> FIRST TWO SECONDS
>
> Mid-shot: the owner sits in their old cap, worn the way they used to wear it. Beside them, Shak writes on a card angled away from them. No LRGR hat on the table.

> OPENING LINE
>
> **“Don't tell me why yet.”**

PAYOFF

Whether Shak called it, and the owner's decision. “Keep your hat, wear it like this” is a valid ending, and maybe the most believable one the brand can post.

WHY PEOPLE WATCH

You guess along with him, the owner's reason might be yours, and he can be wrong in front of them. It's the slate's long conversation, where the talk is the point.

DIFFICULTY

Low per episode: a table, two chairs, the main camera plus a locked phone on the wide, two lavs, and the Red or Blue? profile set left standing for the before-and-after.

08 Shak's Bet

PILLAR

Streetwear Built For Us

THE QUESTION

Does the person behind this hat know who it's not for? And what does he say when someone wants something different?

HOW IT WORKS

A hidden bet, then a live disagreement.

- Three people, each in their own everyday cap, chat with Shak one at a time.
- They step out. Shak puts a coin under one of three upturned cups at their seats, for the person he reckons won't want the LRGR hat, and gives his reason to camera in one sentence.
- They come back. All three try the hat, set it their way and give a verdict. The cup is lifted only after the last verdict.
- Shak asks whoever's least keen “If we did one for you, what's different?”, then has to say whether he'd do it.

> FIRST TWO SECONDS
>
> Three people sit down in a row, each in a different cap of their own, each behind an upturned cup. Nobody has spoken yet.

> OPENING LINE
>
> **“One of you won't want this. I've already picked who.”**

PAYOFF

Hit or miss, the reasons people actually gave, and a founder answering someone who wants something else. It ends on the limit or the decision, never on a pitch.

WHY PEOPLE WATCH

A founder bets against his own product and might be wrong, then has to deal with someone who doesn't want what he sells.

DIFFICULTY

Low–medium.

09 Will It Do Up?

PILLAR

Streetwear Built For Us

THE QUESTION

Will it even do up on my head? And does head size tell you where you'll actually set the strap? (The fit discussions behind the research come from threads about large heads. That's a creative lead, not audience data.)

HOW IT WORKS

The tape's call against the person's own choice.

- **The ladder:** the hat's inside circumference is measured at every notch on camera, with the method shown, and the figures are stacked into a ladder.
- **The call:** each person's head is measured, and the ladder calls the notch closest to that measurement. The call goes on screen for the viewer. The person doesn't hear it.
- **The result:** the person sets the strap how they like it. A call counts only if it's the exact notch they choose.
- **Score:** “The tape called [x] of [n].”
- **Last notch:** whoever's nearest the end of the range tries the last notch.

> FIRST TWO SECONDS
>
> Extreme close-up on the back of a head: two thumbs pressing a snapback's last peg towards its hole. On screen: “Last notch.” Cut before it closes. If nobody is near the end of the range: the ladder building one notch at a time, the tape laid round the inside of the sweatband and each figure stacking on screen.

> OPENING LINE
>
> **“Don't put it on yet. Tape first.”**

PAYOFF

“The tape called [x] of [n]”, the range in centimetres, and what the score showed on these heads, whichever way it went. The closing line is written in the edit from what was filmed. The end card lists each person's rounded head size, their notch and their own words, under “Rough guide only. Same size doesn't mean same shape.”

WHY PEOPLE WATCH

You guess along with the tape, you get a real number for a practical question, and there's a moment of suspense at the last notch.

DIFFICULTY

Medium with four to six people.

10 Mark It Up

PILLAR

Streetwear Built For Us

THE QUESTION

Would the founder change anything about his own hat? And would someone who's worn it pick the same things?

HOW IT WORKS

Three calls each, then a second opinion.

- Shak pulls a hat from a stock box without looking.
- He gets three strips of tape in total, in any mix: orange for “I'd change this”, green for “not touching it”. He chooses where they go, so he has to decide what matters. One sentence per strip.
- Then the wearer marks up the LRGR hat they wore today, with the tape removed, under the same three-strip limit and out of his sight.
- Both hats go side by side.

> FIRST TWO SECONDS
>
> Macro: the first strip of tape going onto a hat on a turntable, Shak's thumb pressing it down. No timer, no voice.

> OPENING LINE
>
> **“Three strips. Orange I'd change, green I'm not touching.”**

PAYOFF

Two marked-up hats in one frame, three strips each, showing where the founder and a wearer agree and where they don't. How many of his three are orange is the honest verdict.

WHY PEOPLE WATCH

A founder marking his own product as flawed is uncommon, three strips force him to choose, the opinion reads in a single frame, and the second opinion gives the video a turn.

DIFFICULTY

Low.

11 Can't Unsee It

PILLAR

Streetwear Built For Us

THE QUESTION

What's the thing on a cap that the person behind a hat brand can't stop seeing?

HOW IT WORKS

A ten-second spot-it loop that only the viewer plays.

- One held frame of a cap with the logo covered, and two silent seconds to look.
- Then Shak's thumb lands on the detail, and he says why it bugs him.
- LRGR's own hats are in the pool, covered like the rest. If an A-frame has one of his pet hates, that episode runs like any other.

> FIRST TWO SECONDS
>
> A locked close-up of a cap on a plain surface, its logo under plain tape. No hands, no voice. On screen: “Spot it?”

> OPENING LINE
>
> **None set. After the pause he names the detail his own way.**

PAYOFF

The reveal and his reason. You go and check your own cap.

WHY PEOPLE WATCH

A tiny game with the answer inside five seconds, built to loop. It leaves you with something to look for next time you're buying.

DIFFICULTY

Low.

12 Shape First

PILLAR

Streetwear Built For Us (drop and range film)

THE QUESTION

What's the new one?

HOW IT WORKS

A backlit row of identical hat silhouettes on stands. The shape is the constant, and the hero.

- A front light clicks on one hat at a time, in release order.
- The last silhouette stays dark a beat longer. That's the new one.
- Each drop adds a stand, so the film becomes a running record of the range.
- The hats are on stands, not heads, so the film makes no fit claim.

> FIRST TWO SECONDS
>
> A white backlit wall, a row of black hat silhouettes on stands, and silence. A switch clicks, and the first hat lights up in colour.

> OPENING LINE
>
> **None at the open; the switch clicks carry it. Shak's only line comes at the end, in his own words: which one's new, plus his real reason for the colour, if he has one.**

PAYOFF

The new colour, revealed in line with everything before it, plus one honest line.

WHY PEOPLE WATCH

The pattern sets up the wait for the last reveal, and at 8–15 seconds it's made to replay. Instead of a stock trailer, it leads with the shape the public product descriptions emphasise (the deep crown and curved brim) and keeps it constant, so colour is the only thing that changes.

DIFFICULTY

Medium.

RECOMMENDATION

The six we'd shoot first.

#	CONCEPT	STATUS	OPENS ON	STRUCTURE	ENERGY AND LENGTH	VIEWER TAKEAWAY
1	**Red or Blue?**	Finish on shoot day	The same face twice, front-on, in two taped caps: "Red or blue?"	Front pick, the side as the turn, a vote; the reveal in Part 2	Slow and deliberate; 25–35s + 20–30s	Whether seeing the side changes the pick
2	**Ours Or Not?**	Finish on shoot day	Hands through a feel box, while the viewer sees the answer	Six scored rounds on a fixed escalation, viewer one step ahead	Quick and playful; 40–50s	The detail he relied on blind, which you can check by hand in a shop
3	**The Tug Count**	Finish on shoot day (recount in post)	A clicker over the helper's shoulder, the wearer soft behind	Running tally in A-B-B-A blocks; the viewer knows the hats, the counters don't	Steady build; 30–45s	How often one person fixed each hat in an hour
4	**Mark It Up**	Finish on shoot day	Macro of the first strip of tape going on	Three-strip self-audit, then a wearer's three	Hands-on and opinionated; 35–50s	What the founder would and wouldn't change on his own hat
5	**The Drawer Hat**	Needs existing evidence	The owner in their old cap, Shak writing on a card beside them	Specific guess, the real reason, one fix, the owner's call	Conversational; 60–90s	Is it the hat, or how you're wearing it?
6	**What Goes First?**	Series started on the day	Shak and the wearer either side of a sealed box, cards to camera	A bet in plain view now, the result at wear 30	Fast; Ep. 0 12–20s	Two calls on what wears first: pick a side and come back

Why these six work together

- **One side-profile video, not four.** Red or Blue? carries "check the side" once, done blind, and puts it to the test instead of asserting it. The other five reach the product through touch, behaviour, critique, conversation and time. The Drawer Hat uses the profile set only if loosening turns out to be its one fix.
- **In three of them, Shak commits before he knows the answer:** Ours Or Not?, The Drawer Hat and What Goes First?. In Mark It Up, he marks his own hat before a wearer marks theirs. In Red or Blue? Part 2, he responds to a pick that may not be his.

That's how his personality comes through without anyone having to assume what it is: being right, being wrong, and how he takes it. - **Most of them can go against LRGR or against Shak on camera.** - Red or Blue? and The Tug Count can both land on the other hat. - Ours Or Not? can beat him. - Mark It Up puts

his own product's flaws in frame. - The Drawer Hat can end on “keep your hat”. - What Goes First? can show wear, and his call can be wrong.

That is the proposal's own rule (“If the LRGR hat doesn't come out ahead, it stays in”), built into the structures instead of written in a box. - **Six different first frames, and only two on a tabletop.** Two faces in taped caps, a feel box, a clicker over a shoulder, a tape macro, an owner in their old cap, and two people holding cards beside a box. The two tabletop openings (the feel box and the tape macro) look nothing alike. - **Six different structures:** a blind pick with a turn across two posts; scored rounds against chance on a fixed escalation; a running tally in alternating blocks with no reveal; a three-strip audit with a second opinion; a guess, a conversation and one fix; and a bet in plain view with a long payoff. Lengths run from a 12-second Ep. 0 to a 90-second conversation. Two are quick (Ours Or Not?, What Goes First?), two build (The Tug Count, Red or Blue?), one is talk (The Drawer Hat) and one is hands-on opinion (Mark It Up). - **Six different takeaways:** whether the side changes the pick, the detail to check by hand, how often one person fixed each hat, what the founder would change, whether it's the hat at all, and what wears first.

1

SHOOT PLAN

Red or Blue?

THE IDEA

Someone who has never seen an LRGR hat picks between two caps with every logo taped over. They pick twice and get the same question both times. The first pick is front on, in a mirror. The second comes after they see locked side and back frames of both hats, stacked on a laptop screen. Part 1 shows both picks and asks the viewer the same question as a vote. Part 2 recaps the picks and the vote, then films Shak hearing the picks for the first time, peeling the tape himself and responding. It also discloses the comparison cap and how it was bought.

The video tests the proposal's line, "Show the side, not the front," on one head instead of stating it. If seeing the side changes nothing, that is the result, and we publish it.

Viewer takeaway - **Part 1:** whether seeing the side and back changed one person's pick, and which hat the viewer would pick. - **Part 2:** which hat was LRGR, whether the wearer and the viewers agreed, and how the founder takes an answer that may not go his way.

OPENING

Part 1 - **Shot:** a stacked 9:16 split made from the locked 0° frames of each hat's first pass. - The same face in the same position in both halves, eyes on the target beside the lens. The taped patches and coloured dots are clearly visible. - The red-dot hat is always in the top half and the blue-dot hat in the bottom, in every split in both parts. - A thin neutral divider separates the halves. Each half has a small red or blue chip in its top corner, so the halves can still be told apart in the side and back frames, where the dots don't show. - **Action:** none. The frame is still for about 2s. - **Dialogue:** at about 1s, the producer's prompt from the mirror round, off camera: "Which one would you wear? Why?" These are the exact words on the prompt card, used in both rounds. - **On screen:** "Red or blue?" centred on the divider from frame one. Burned-in captions for the prompt.

Part 2 - **Shot:** close on the two taped hats on the stool. Shak's thumb and finger pinch the corner of the tape on one of them. Cut before the tape lifts and any logo shows. This is live footage from the start of the real peel, not a re-enactment. - **Dialogue:** room audio only, as recorded. - **On screen:** "Red or blue? Part 2".

BEAT BY BEAT

Part 1 (about 30s; let it run to 35s if the wearer's reasons need it, rather than cutting meaning)

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Front split at 0°, from each hat's first pass. Still.	From about 1s, the producer (off camera): "Which one would you wear? Why?"	"Red or blue?" on the divider. Use the producer's lav audio exactly as recorded. Burn in captions for all speech.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
2–9s	Mirror round, over the shoulder: the wearer swaps hats front on and settles on one	The wearer's pick and reason, in their own words	Label "Round 1: mirror, front on", then "Mirror: [colour]". Trim pauses only. "Not sure" stays in.
9–11s	Side split at 90°, held at least 2s	None	Labels "Side" and a small "Your pick?". Straight cut. No sting, whoosh, push-in or guide line.
11–13s	Back split at 180°, held at least 2s	None	Label "Back". Crop, scale and grade identical in both halves.
13–15s	Second rig, over the shoulder: the wearer looking at the side pair on the laptop	Whatever happens: silence, a laugh, a comment	No added reaction sound.
15–24s	Main camera, locked frame: the wearer, hat off, on the 0° marks, answering	The producer (off camera), same words: "Which one would you wear? Why?" Then the wearer's second pick and reason.	Label "Round 2: side and back". On-screen text builds to "Mirror: [colour] · Side and back: ___", filled in with their exact answer, including "same" or "can't pick".
24–30s	The side split again, held	None	"Which would you wear?" then "One's ours. Tape comes off in Part 2." Use a poll sticker where the platform has one, otherwise "Comment red or blue". Hold at least 4s so both lines can be read.

Part 2 (about 45s: it has three payoffs and a disclosure to fit)

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Peel insert: Shak's fingers on the tape corner, the other taped hat beside it. Cut before it lifts.	Room audio	"Red or blue? Part 2".
2–8s	The side split from Part 1, chips still red and blue	None	"[Name]: mirror [colour], side and back [colour]". Then "You voted: red [x] · blue [y]. [n] votes, [platforms], counted [date]." Hold until both lines can be read.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
8–17s	Tape-off two-shot, both hats still taped. The wearer tells Shak their picks and Shak asks why.	Shak's starting point: "Which one'd you go for?" The wearer answers in their own words.	Small line across this segment: "Filmed on the shoot day, before Part 1 went up." This means the cut never implies Shak is reacting to the vote.
17–21s	The peel, intercutting the insert and the two-shot. Both hats.	Live audio	Each chip changes to "LRGR A-frame [colourway]" or "[comparison product]" as its logo appears. Real speed: no slow motion, no sting.
21–31s	Shak responds, then looks at the side split on the laptop beside them	The producer (off camera), after the peel: "What do you make of that?" Shak in his own words.	Unscripted. Keep his first reaction even if it's flat, and don't cut away from a pause. When he's looking at the laptop, cut in the actual split file he's looking at.
Chosen and bought by 10x Visuals (our video team) to a rule written before the shop visit. Details in caption." Hold long enough to read.			
36–39s	A-B-A strip: the hat that went on first, shown in its first-pass and third-pass side frames, stacked	None	"[Colour] went back on at the end, as a check." If the frames differ: "It sat differently second time round."
39–45s	Back to the people: the wearer's answer to "Does knowing which is which change anything for you?", or Shak's last line	Their own words	Lower line, this beat only: "One head, two hats. Opinion, not a fit test." End on a person, not a card.

SHAK'S ROLE

- **During the picks:**
- He stays out of the room and out of earshot, and doesn't see the laptop.
- Nobody tells him the picks.
- He doesn't see the comparison cap before the shoot.
- At The Tug Count briefing, he doesn't handle or name either hat.
- **At the tape-off:**
- He talks to the wearer, not the lens.
- He hears the picks with the tape still on and can ask why.
- He peels the tape himself, then responds.

- After that, he looks at the side split on the laptop. It's his first look at the frames.
- **Tone:** no performance. He talks to the wearer the way he would to anyone trying on his hats.
- If the pick isn't his hat, he says what he actually thinks. He can agree, disagree, ask more or concede.
- No recovery pitch, and he doesn't explain the result with product features the video can't show.
- He talks about how each hat sat on this person, as filmed. Nothing about the other brand beyond that.
- **Recognising his own hat:** he may recognise it under the tape. If he does, saying so on camera is fine.
- **Starting points.** He says these his own way, or not at all:
- "Which one'd you go for?"
- "What was it about that one?"
- "What'd you see from the side?"
- **Off-camera questions from the producer, after the peel:**
- "What do you make of that?"
- "Did you know which one was yours before the tape came off?"
- (At the laptop) "What do you notice about how each one sits on them?"
- "Would you have picked the same, on their head?"
- "Seeing that, is there anything you'd want to change on yours?"
- **If he names a change he'd make:** it stays as his opinion. It is never captioned as a planned product change unless LRGR confirms one.

PAYOFF AND ENDING

- **Part 1:**
- The payoff is "Mirror: [colour] · Side and back: ___", one person's pick before and after seeing the side and back.
- It ends on the vote. That's a real question, not a call to action, because the count goes into Part 2.
- **Part 2:**
- The payoff is three answers landing together: which hat was LRGR, whether the wearer and the vote agreed, and Shak responding to picks he's hearing for the first time.
- It ends on a person, never on a product link: either the wearer's answer about whether knowing changes anything, or Shak's last line.
- **If the wearer and the vote both land on the other hat:** that's the ending, with Shak's response. Logos taped; our producer knew which was which. One wearer; the vote is opinion."
- **Once Part 2 is up:** pin a comment on Part 1 pointing to it.

2

SHOOT PLAN

Ours Or Not?

THE IDEA

Shak puts his hands into a box he can't see into and calls each cap "ours" or "not ours". Before each round the producer tosses a coin. Heads loads one of three LRGR A-frames. Tails loads one of three caps from other makers, which 10x bought new to a written spec. The camera looks in through the open back of the box. A tag on the box shows the viewer the answer before Shak makes his call.

There are six rounds, and he gets less of the hat each time: - Rounds 1–2: the whole hat, except a covered patch over the front badge. - Rounds 3–4: no front panel. - Rounds 5–6: only the strap, sweatband and brim.

He isn't told any answers until all six are called. Then he guesses his own score before he hears it.

Viewer takeaway: the viewer plays along already knowing each answer. They watch whether the founder can pick out his own hat as the clues are taken away. They come away with his score next to what pure guessing would get. They also learn which part of the hat, if any, gave his own away. That part is a difference he could feel. It doesn't mean one cap is better. He can fail, and a fail still posts.

OPENING

- **Shot:** the main camera is locked, front-on to the open back of the box, and framed 9:16.
- A plain cardboard box lined with matte grey sits in the lower half of the frame. Shak's face and shoulders are above it.
- There's a cap inside, and Shak's hands are already on it through two curtained holes.
- A tag card is clipped to the top edge of the box on the camera side, facing the lens. It reads **LRGR** or **NOT**, whichever round 1's coin gave.
- **Action:** the first frame is mid-handling: his fingers are moving over the crown. He doesn't know what the viewer knows. There's no load shot here. The load appears in the wide at 2s.
- **Dialogue:** use his first think-aloud line from round 1, as it comes. It should describe the cap, not judge it. If nothing usable lands in the first two seconds, open on the hand and cardboard sound. Don't give him an opening line.
- **On-screen text:**
- Top: "Ours or not? Hands only."
- From about 1s, a small arrow pointing to the physical tag: "The answer. He can't see it."
- From 2s: a small "ROUND 1/6 · whole hat" at top left, and six empty tally boxes sitting just above the bottom UI zone.
- The tag is a physical card in the shot. It is never added as a graphic.

BEAT BY BEAT

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Round 1: hands on the cap, tag readable, Shak's face above the box.	His first line from round 1, if there is one.	Bring up the cardboard and curtain sound. Add the title and the tag arrow.
2–8s	Phone wide, sped up, showing one full load. The producer says "Turn away" and Shak's chair turns. The coin lands in the tray, then the die is rolled and the log written. A hat goes from the tub into the box, the tag is clipped, the producer says "Go" and the chair turns back.	Producer: "Turn away." … "Go."	Used once only. Rules card over the wide, in two lines: "Coin toss every round. Could be ours, could be not." / "30 seconds a go. No answers till all six are called." The ladder appears on the right edge with R1–2 lit.
8–15s	Rounds 1–2: the whole hat (badge covered).	Shak thinks aloud. If he goes quiet: "What's telling you that?" He calls. Producer: "Logged."	About 3.5s a round: hands in, his best line, the call. A ✓ or × lands in the tally on his call word. The viewer knows the answer and he doesn't.
15–25s	The ladder steps to R3–4: "No front panel". His hands move to the sides, back, strap, brim and inside.	Same prompt if needed.	About 5s a round. Crop into the hands from the main frame. Keep any hesitation or change of mind. His first call is the one that counts.
25–37s	The ladder steps to R5–6: strap, sweatband and brim. Use the tightest crops: a thumb along the sweatband, the strap unsnapped and snapped, a finger along the brim edge.	Same prompt if needed.	About 6s a round, the slowest part of the cut. Any music bed is gone by now. Let the snaps and the pauses play.
37–41s	Hands come out and Shak sits back.	Producer: "How many out of six do you reckon?" Shak commits to a number.	On screen: "His guess: [n]/6"
41–49s	The producer reads the log round by round. Hold on Shak's face.	Producer: "One: you said [call], it was [answer]…" Shak reacts however he reacts.	If the read-out runs long, trim it to the misses plus round 6. The tally still shows all six. Then show the score, "[n]/6", then the luck card (wording in G).
49–58s	The producer tips the pool out of the tub, still taped, and Shak sees the other caps for the first time. Then cut to the ending shot for whichever result he got (see G).	"Which one got you?" or "What were you going off?" His answer is the last line.	End on his line, with no sting and no spoken product link. Small end text: "Other caps bought new by 10x Visuals to a written spec. Not named."

Throughout the cut: - **Voided rounds:** show the voided round for about 1s with "VOID · [reason] · re-tossed", then the re-tossed round. - **Music:** none, or a low bed under rounds 1–4 only. - **Sting:** never add

one at the reveal.

SHAK'S ROLE

- **What he's doing:** playing a game he can lose, not presenting.
- **Who he's talking to:** the producer, just left of the lens. Not the camera.
- **Tone:** thinking out loud. It's fine to be unsure and fine to change his mind before the call. No performed confidence and no performed doubt.
- **Describe, don't rate.** He talks about what he can feel, such as stiff, soft, an edge, a seam, a shape or the snap. Not whether it's good. How his comments are handled:
- No rating of any cap, good or bad, goes on screen as text or on the end card.
- A line running down an LRGR hat stays in.
- A line running down a cap that turns out to be a decoy is trimmed back to his call. Those caps aren't named and can't answer back.
- A line praising a cap that turns out to be LRGR stays as his words only. It never becomes a caption.
- **Materials and how the hats are made:** he says what he feels.
- If he names a material or a process for an LRGR hat, it's cut unless LRGR confirms it in writing before posting.
- Nothing he says about a decoy's materials goes out.
- **Other brands:** if he names the brand he thinks a decoy is, trim the name and keep the call.
- **If crown depth is what he goes off:** that's fine. It's a difference he could feel, not a ranking, and no caption calls the deeper hat better.
- **His rules.** The producer reads these to him on camera before round 1:
- Turn the chair away on "Turn away" and face back on "Go".
- Don't look at the tub or the tag.
- Thirty seconds a round. The producer says "Ten" with ten seconds left, then "Call it".
- One call per round. Don't ask whether he got it.
- What he can touch:
  - Rounds 1–2: anything except the patch over the front badge.
  - Rounds 3–4: nothing on the front panel.
  - Rounds 5–6: only the strap, sweatband and brim.
- He can open and close the strap. The producer resets it afterwards.
- The same hat can come back. Recognising one from an earlier round tells him nothing about which pile it came from.
- **After the reveal:** he reacts however he reacts. Nobody is fishing for a particular response.

Off-camera questions - **Before round 1 (optional):** "What do you reckon you'll be feeling for?" This lets the edit check whether he actually used it. - **During the rounds:** "What's telling you that?" / "What are you feeling for?" / "Ours or not?" (when time is up) - **After round 6, before any answers:** "How many out of six do you reckon?" / "Which one were you least sure about?" - **After the reveal:** - "Which one got you? What did it feel like?" - "What were you actually going off? Was it the same thing every round?" - "Did that change once the front was off limits?" - "Could anyone feel that, or only someone who knows the hat?"

PAYOFF AND ENDING

Payoff: three numbers in quick order: his guess at his score, his real score, and what guessing gets. The ending then depends on the result: - **He missed at least one:** end on the round that fooled him, called back from the earlier footage with the tag visible, and his answer to "Which one got you?" - **Six from six:** end on the detail macro and his answer to "What were you going off?" The end card notes that rounds 5–6 allowed only the strap, sweatband and brim. - **He scored around three:** end on what he thought he was feeling for, over the pool lineup. "Couldn't tell by hand" is a result.

No CTA.

Caption, factual: "Every round was decided by a coin toss, and the tag was set before Shak's hands went in. The other three caps were bought new by 10x Visuals, who filmed this, to a written spec ([list which parts of the spec they met]), and they aren't named. Six rounds, one go. It's his own hat, so this tests whether he can tell them apart by hand, not which cap is better."

Luck card wording. These odds hold whatever Shak does. A fresh coin toss decides every round, so a blind guess is right half the time:

SCORE	ON SCREEN
6/6	Guessing gets 6 from 6 once in 64 goes.
5/6	Guessing gets 5 or more about 1 in 9 goes.
4/6	Guessing gets 4 or more about 1 in 3 goes.
3/6	3 from 6 is what guessing gets on average.
2/6	Guessing gets 2 or fewer about 1 in 3 goes.
1/6	Guessing gets 1 or fewer about 1 in 9 goes.
0/6	Guessing gets 0 from 6 once in 64 goes.

3

SHOOT PLAN

The Tug Count

THE IDEA

One wearer spends an hour doing something they actually do, split into four 15-minute blocks. They wear the two taped caps from Red or Blue? in A-B-B-A order, and a coin toss on camera decides which cap is A. Each time a hand moves or re-seats the cap, the helper clicks a tally counter. The viewer is told which cap is LRGR from the start. The wearer isn't told, and the official counter doesn't know either: they recount later from muted footage with no idea which cap is which.

The edit plays like a scoreboard. A strip across the top fills one block at a time. A half-time score appears after block 2. The second half runs the same caps the other way round, so the viewer gets a provisional answer in the middle and then sees whether it holds. The video ends on full-time totals, judged against a draw margin Shak wrote and signed before anyone was counted.

Why someone stops: a thumb clicking a counter as a hand goes up to a cap is a habit most cap wearers recognise straight away. The question (which cap gets fewer touches?) is set up in about 10 seconds and doesn't resolve until the last card.

Takeaway: how often this one person moved or re-seated each of these two caps over two 15-minute blocks each of their usual [activity]. That sits next to the wearer's own guess and the cap they picked in Red or Blue?. The research context mentions people who keep pulling their caps down. This video counts that once, for one person, labelled informal. It is not a verdict on comfort, fit or quality, and on its own it says nothing about crown depth.

OPENING

- **Shot:** Phone B, locked behind the helper's shoulder on the 2x–3x lens. The tally counter is sharp in the foreground in the helper's hand. The wearer is soft about 2m back, partway through the [activity]. This is real session footage at real speed.
- **Action:** The wearer's hand goes up and moves the cap, and the helper's thumb clicks. The moment is chosen by rule: it's the first touch of the session that the blind recount logged, that reads clearly on phone B and that has a real click on it. That will usually fall in block 1, but the label shows whichever block it actually came from.
- **Dialogue:** Nothing for the first two seconds. The click is the only sound. At about 2s, cut to the briefing for Shak giving the rule in his own words. A starting point is "Every time you touch it, that's a click." On the day it was said first; in the edit it comes second. Subtitle what he actually says, not the starting-point line.
- **On-screen text:** "Every click = a hand moved the cap." A small label on the soft cap reads "Block [n]: [LRGR / comparison cap name]".
- **Fallback:** If no logged touch reads cleanly on phone B (no touches, the hand is blocked, or the click is missing or muddy), open on the locked wide at the session's first logged touch. Use the wide's own audio and a tally overlay driven by the recount log. Never re-enact a touch, and never add a click sound or move one to a different moment.

BEAT BY BEAT

The edit runs about 50s. Each block gets 4s, the half-time and full-time cards need reading time, and the two check-ins add about 5s. If the check-ins are cut (both or neither, see the edit rules), it lands around 45s. Don't pad it.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Phone B at real speed. Counter sharp, wearer soft. A hand goes up and moves the cap, and the thumb clicks.	None.	Real click, dry, no music. Text: "Every click = a hand moved the cap." Cap label: "Block [n]: [hat]".
2–5s	Briefing two-shot on the main camera: Shak and the wearer, with the rules card in the wearer's hand.	Shak gives the rule in his own words. Keep the wearer's reply or question if there is one.	Lav audio, subtitled word for word. Lower third: the wearer's first name and any link to LRGR or the crew.
5–8s	Insert filmed before the wearer arrived: Shak writes the draw margin on the card and signs it, then the producer countersigns.	Shak's reason for the number, if he gave one in a sentence. Otherwise none.	Card legible for at least 2s. Text: "Set before filming: one cap needs [margin] fewer touches AND fewer in both halves. Otherwise it's a draw."
8–11s	Coin toss result, then both taped caps side by side with the "1" and "2" tags readable. The four-segment strip builds across the top.	None. Text: "4 × 15 min. The wearer doesn't know which is LRGR. Which gets fewer touches?"	
11–15s	Block 1 on the locked wide, time-compressed, with an overlay clock running 00:00 to 15:00. It drops to real speed for 1.5s on the block's first logged touch.	None.	The tally ticks silently at each timestamp in the recount log. Room tone underneath. The real click plays on the real-speed touch only if the helper actually clicked on it. At 15:00 the official number lands in segment 1.
15–18s	The wearer answers the check-in, then the swap at the mark: cap off, next cap on, the wearer sets it, says "done", and the timer starts.	Helper, from the card, before the cap comes off: "Anything you've noticed with this one?" Wearer: [their answer, whatever it is, including "nah, nothing"].	Subtitled word for word. This is the first check-in on cap A.
18–22s	Block 2, same treatment.	None.	Same compression, screen time and real-speed rule. Segment 2 fills.
22–25s	Check-in, then the reset: the same cap comes off and goes back on at the mark, followed by "done" and the timer.	Same question, same words. Wearer: [answer].	First check-in on cap B. The reset is shown because it's part of keeping it fair.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
25–28s	The half-time card over the wide.	None.	"Half-time: LRGR [n] · [comparison] [n]". Then: "Second half: same caps, other way round." Nothing highlights whichever cap is ahead: no colour change, no sound.
28–32s	Block 3 (the same cap as block 2).	None.	Segment 3 fills.
32–33s	Swap 3: cap off, other cap on, "done".	None. The check-in is recorded but not used.	1s, with the routine visible.
33–37s	Block 4.	None.	The strip is complete. Keep the timer beep at 15:00 if it's audible.
37–41s	The wearer on the wide after block 4.	Helper: "Which one do you reckon you touched more, if either?" Wearer: [answer].	Text: "Their guess: [cap 1 / cap 2 / no difference]", followed by that cap's name.
41–47s	Full-time card.	None.	The totals, which cap was lower in each half, and the verdict line, using the card written before the recount (see G). A small line underneath: "Live count ([helper's role], not blind): [n] · [n]". No sting and no change in music.
47–51s	Hold on the card while the closing lines appear.	None.	"[First name] picked [hat] in Red or Blue? earlier that day." Then: "One person, one hour, informal." Go out on room tone.

Edit rules, fixed before editing starts: - Lock the cut before the recount comes back. That means the check-ins (in or out), Shak's reaction (in or out) and every card layout. The recount then only adds the numbers, the tally ticks and the real-speed moments chosen by rule. - Every number on screen comes from the recounter's timestamped log, never from the live clicks. - Each block gets 4s at the same compression. - The real-speed moment in each block is that block's first logged touch, shown for 1.5s from the wide. A block with no logged touches gets 1.5s at 07:30, with the tally showing "0". - Use real click audio only where the helper actually clicked. Never add, copy or move a click. - Use the first check-in for each cap (after blocks 1 and 2), both or neither, whatever was said. Cut both only for a technical reason, such as the answer being inaudible. Unprompted comments during blocks stay out of the edit and go into the log. - No music anywhere. Both caps' labels use the same colour and weight throughout.

SHAK'S ROLE

- **What he does:** 1. **Before the wearer arrives (about 5 min):** he sets the draw margin with the producer and signs the card on camera. This is his decision on screen: he commits to the terms before anyone knows the count. Any number applies to both caps equally, so it can't favour either. 2. **The briefing**

(about 5 min): he gives the wearer the rule, answers their questions, and leaves for the tabletop. 3. **Optional:** his first look at the result.

- **Who he's speaking to:** the producer during the signing, and the wearer during the briefing. Never the lens.
- **Tone (direction, not a persona):** plain and quick, like running someone through the rules of a game. No build-up about what it might show.
- **What he doesn't do:**
- Say which cap is his, or look at, touch or hand over either cap.
- Predict a result, say "ours", or react to any adjustment the wearer makes.
- Come back to the space during the hour, ask the helper how it's going, or hear the live count.
- Overrule the card. The card is the rule. If what he says differs from it, the producer clears it up on camera before block 1.
- **Starting-point lines (in his own words, or none):**
- "Every time you touch it, that's a click."
- "Scratch your head, doesn't count. If the hat moves, it counts."
- "Just do what you'd normally do."
- **Off-camera questions at the signing (from the producer):**
- "How far apart would they need to be before you'd say one's actually ahead?"
- "Why that number?"

If he has no basis for a number, the producer offers the recommended default and he can take it or change it. The default is: it only counts if one cap has at least 3 fewer touches **and** at least a quarter fewer than the higher total. That's a rule of thumb, not a statistical test. - **Off-camera questions at the briefing (from the producer):** - "Can you run them through what counts?" - "What if they just scratch their head?" - "What if it comes off?"

These get the edge cases said naturally. Check his answers against the card. - **Optional reaction:** decide before the recount whether to film it. If you film it, it goes in the same slot (after the full-time card) whichever verdict lands. - Prompts: "What do you make of that?" and "Anything there you didn't expect?" - Never ask "Happy with that?" or "Why do you reckon yours did better?" - It only runs under his sign-off to publish any outcome, which is given before the slate locks.

PAYOFF AND ENDING

- **Payoff:** the full-time totals against the margin and the halves rule, both signed before filming. Next to them sit the wearer's guess and their Red or Blue? pick. The count, the guess and the pick might agree, or they might point different ways. Either way, that's the ending.
- **Verdict cards, written and laid out before the recount comes in:**
- "Fewer touches: LRGR, by [n]"
- "Fewer touches: [comparison cap], by [n]"
- "Draw: inside the margin"
- "Draw: the halves split"

All four share the same layout, the same disclosures and the same hold time. The edit drops in whichever one happened. Never use "wins", "comfier" or "stays put". - **Ending:** hold the card, then "One person, one hour, informal." Go out on room tone. No call to action, no question to camera, no music sting. - **Which pick goes in the closing line:** use the wearer's side-view pick from Red or Blue?. If their mirror pick and side pick differed, state both: "picked [hat] in the mirror, [hat] from the side". - **Caption**

template: "One person, one hour, informal. [First name] did [activity] on [date] in four 15-minute blocks, swapping two caps in A-B-B-A order (a coin toss decided which went first). Both caps had all branding covered the same way and were tagged 1 and 2. Asked afterwards, [first name] [had no guess / guessed right / guessed wrong] about which was LRGR. Counted: any hand to the cap that moved or re-seated it [full rules]; [n] of these were re-seats after something else knocked it. A cap is only called if it's [margin] lower over the hour and lower in both halves, which was set and signed before filming. Otherwise it's a draw. Official count: a recount from muted footage by someone with no LRGR connection who didn't know which cap was which, with [n] unsure moments left out. Live clicker: [role, e.g. LRGR helper]. Both caps were worn with tape on them." - **Posting:** after Red or Blue? Part 2. Put a post from outside this shoot between this one and Mark It Up.

4

SHOOT PLAN

Mark It Up

THE IDEA

Shak pulls one of his own hats out of a stock box without looking. He gets three strips of tape: orange for "I'd change this", green for "I'd leave this". Any mix is allowed, but three is the limit, so he has to choose what matters most on his own product. He puts each strip on, then says one sentence about why.

Later, with Shak out of the room, the participant marks up the LRGR hat they wore through Red or Blue? and The Tug Count, under the same rules. The viewer has already seen Shak's three strips and the wearer hasn't, so the viewer can spot matches before either of them can. At the end, one cover lifts off both hats at once, and Shak and the wearer see each other's strips for the first time on camera.

Viewer takeaway: - What the founder would and wouldn't change on his own hat. The tape shows it, rather than him claiming it. - How many of his three strips were orange. - Whether someone who has worn the hat marked the same spots.

The video puts two opinions in one frame. It does not test the hat.

Status: finish on shoot day. Any "I'm changing that" line gets checked before posting (see H). Runs about 55–60s.

OPENING

- **Shot:** a close-up of the hat on a manual turntable. Recommended camera setup: main camera with a 90–105mm full-frame-equivalent macro, about a metre away, mounted vertically for 9:16, at its highest resolution so the edit can punch in to a macro-tight frame on the strip. Use the live take of the first strip Shak actually places, whatever its colour and wherever it goes.
- **Action:** Shak's fingers bring a strip into frame and lay it on the hat. His thumb presses it flat and holds for a beat.
- **Dialogue:** none for the first two seconds. Only natural sound: the tape and the press. At about 2s the cut goes to the wide shot, and Shak states the rule in his own words. A starting point: "Three strips. Orange, I'd change it. Green, I'd leave it."
- **On-screen text:**
- From the first frame: a small ID line, "Shak, LRGR founder". It explains whose hand it is and whose hat it is. The scroll-stop is a founder taping up his own product.
- From about 2s, a legend at the top of frame in the real tape colours. It stays to the end: "ORANGE = I'd change it · GREEN = I'd leave it".
- Over the wide of the pull: "Pulled blind. Crew packed the box."
- **Why it works before the explanation:** a hand pressing bright tape onto a new hat is an odd sight, and the ID line says it's the founder doing it. The colour means nothing until the legend arrives at 2s, so the opening works whichever colour goes on first. Never peel a strip off and lay it again to get a "better" first colour.

BEAT BY BEAT

The two halves are shot hours apart. The edit plays them as one sitting.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Punched-in close: strip 1 goes on the hat on the turntable. Shak's thumb presses it flat.	None.	Live take. Tape sound and room tone only, no music. ID line only, no legend.
2–6s	Wide: the edit backs up to before strip 1. An insert under 1s of the open stock box with several hats loose inside. Shak, head turned away, reaches in, pulls one out and sets it on the turntable with its front at the 0° mark.	Shak states the rule his way. Starting point: "Three strips. Orange, I'd change it. Green, I'd leave it."	On set this happens before beat 1. The legend comes in at 2s and stays. "Pulled blind. Crew packed the box." over the wide.
6–10s	Macro of the spot strip 1 marks: static, then his thumb re-pressing the same strip.	His one sentence on strip 1. If he stalls before any strip, the producer asks whichever question he hasn't covered: "What wouldn't you touch? Why?" or "What would you change if you could? Why?"	Counter "Shak 1/3" under the legend. Don't show the placement again, because the cold open already did. Captions use his words, cut but never reworded, in the lower third above the platform UI.
10–15s	Close: he turns the hat and hesitates, then strip 2 goes on. Cut to its macro.	Sentence 2. Follow-up only if needed: "Why that one?"	"Shak 2/3". Keep one real hesitation (up to about 1s) somewhere in his half, because it shows him choosing.
15–20s	Close: strip 3 goes on, then its macro.	Sentence 3.	"Shak 3/3".
20–23s	Top-down of Shak's marked hat alone for about 1.5s. Then the wide: the producer lifts it into the lidded box and the lid shuts.	None.	Text: "Hidden from [Name] till the end." The lid closing gets about 1s.
23–27s	Wide, same table and marks, Shak's chair empty. The wearer sits down. Their LRGR hat is on the turntable with the blinding tape off. A 1s insert of the front panel.	Producer, off camera: "You've worn it today. What would you change? What would you leave?"	Two text cards, about 2s each: "[Name] · [link to LRGR or the crew] · wore this one on and off for [logged time] today", then "Shak's out of the room." Same marks and grade as Shak's half.
27–39s	Close, then macro, for each of the wearer's three strips (about 4s a strip).	Their one sentence per strip. Follow-up only: "Why that one?"	"[Name] 1/3 … 3/3". Inset at top right: the top-down of Shak's hat from 20s, so the viewer can compare while the wearer can't. If the strips don't read at inset size, drop the inset and let the reveal carry it. Every strip and its reason stays.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
39–43s	Top-down: the producer lifts one plain cover straight up off both hats. Hands out, then a clean hold of at least 2s. Cut to Shak's face, then the wearer's, at their first look.	None until someone speaks.	Inset off. No sting, no whoosh, only room tone. Their reactions are the real first look, and the clean top-down is the same moment seen from above.
43–54s	Medium on Shak, with the phone wide as a two-shot. Cutaways to the macro of whichever strip is being discussed, and to the turntable rotating both hats.	Producer: "What did they mark that you didn't? Agree or not?" Then to the wearer: "Anything he marked you'd see differently?"	Use their first real answers. Cut for length, not tone: a disagreement and a concession both stay. Keep qualifiers that change the meaning ("for me", "maybe"). A line saying he's changing something stays only if it's verified (see H).
54–58s	Top-down again: both hats with every strip, nothing touched.	None, or the tail of the last line.	Tally text: "Shak: [x] orange · [y] green" and "[Name]: [x] orange · [y] green". Hold at least 2.5s. The video ends there.

SHAK'S ROLE

- **What he's doing:** deciding, not presenting. He's looking over a hat he didn't choose and picking the three things on it that matter most to him.
- **Who he's speaking to:** the producer, sitting just off the main camera, not the lens. At the reveal, the wearer beside him as well. Thinking out loud is fine.
- **Tone:** however he naturally talks while looking over a hat across a table. If he's quiet and deliberate, let it be quiet. No selling and no wrap-up line. There's no clock: he takes as long as he needs, and the edit compresses the wait.
- **The rules, read from a card before rolling.** The wearer hears the same card, word for word: "Three strips, any mix of orange and green. Orange is something you'd change. Green is something you'd leave as it is. All one colour is fine. Strip on first, then tell us why."
- **Brief him once. This is not a rehearsal.**
- One sentence per strip is enough. If he says more, the edit will cut it.
- On green strips, say why you'd leave it or what you decided, not what the part does. Leave out materials, how it's made, and anything about it being "better", unless it's confirmed.
- If he moves a strip because he's changed his mind, that stays in. What we won't do is redo a strip for a better shot.
- Only mention a change he's making if it's real. No dates, no hints at a future product.
- He won't see the wearer's hat until the cover lifts, and once it lifts nobody touches a strip. He shouldn't tell the wearer what he marked. At the tape-off and over lunch, he shouldn't talk them through what he likes or would change about the hat.
- **Suggested line, a starting point only:** "Three strips. Orange, I'd change it. Green, I'd leave it." He says it his way, or the legend carries it.
- **Off-camera questions (from the producer):**
- "What's the first thing you look at?"

- If he stalls, ask whichever question he hasn't covered yet, so the prompts don't steer the mix: "What wouldn't you touch? Why?" or "What would you change if you could? Why?"
- For each strip, only if he hasn't said: "Why that one?"
- At the reveal: "What did they mark that you didn't? Agree or not?"
- If he agrees with one of their orange strips: "Would you change it, or leave it?"
- If he says he's changing something: "Is that decided, or a maybe?" A "maybe" stays a "maybe".

PAYOFF AND ENDING

The payoff is the cover lifting: two hats side by side, three strips each, showing where the founder and someone who has worn the hat agree and where they don't. Because the viewer has already seen Shak's strips, the reveal belongs to the two people at the table. Their first look and Shak's response are the new information. The honest number is how many of Shak's three strips are orange, stated plainly in the tally.

The video ends on the top-down hold with the tally. The last sound is the tail of the last real line, or room tone. No end card, no product line, no question to camera. If someone will answer comments, the post caption can carry one plain question, for example "What would your three be on your own cap?" If Shak places zero orange strips, see J.

5

SHOOT PLAN

The Drawer Hat

THE IDEA

Someone brings a cap they bought and then stopped wearing. With the camera already rolling, they take it out of their own bag and put it on the way they used to wear it. Before they say anything, Shak looks it over and writes one specific guess about why it ended up in the drawer. The owner gives their real reason first and then turns the card over. Shak gets one fix on their hat (the strap, how it's seated, the angle, or the brim with permission). He never swaps it for another hat. The owner then decides where it goes: back on their head or back in the bag.

Viewer takeaway: a reason a hat stops getting worn that the viewer may recognise, and an answer to whether it was the hat or the way it was worn. What's on show is Shak's eye, not his hat. LRGR appears only if the owner asks to try one. "Keep your hat, wear it like this" is a complete result.

Length: 75–90s. It's the slate's long conversation, and the reason and the flip both need room. It can run to about 100s if the owner asks to try an LRGR hat, because that stays in.

OPENING

- **Shot:** Main camera, locked mid two-shot at the corner of the table. The owner sits in their old cap, worn the way they used to wear it. Shak sits beside them, writing on a card tilted away from them. The table holds only the card and the marker. No LRGR hat is anywhere in frame, background included.
- **Action:** The pen is moving. The owner glances across and can't see what he's writing. The camera can't read the card either.
- **Dialogue:** Nothing for the first two seconds. The only sound is the pen on the card, picked up by Shak's lav. The suggested first line is Shak's, said to the owner whenever they start to explain: "Don't tell me why yet." It's a starting point. He says it his own way, or not at all.
- **On-screen text:**
- 0–2s: "Guessing why they stopped wearing it."
- Lean version, as a lower third from about 3s: "[Name] has been on set with us all day. Shak hasn't seen this hat or heard why."
- **Cold-open rule:** This is the real writing moment, a few minutes into the take. It is never restaged. If the main camera misses it, open on the locked wide of the same moment. When the edit catches up to the writing, it carries on from the next frame, so no shot plays twice.

BEAT BY BEAT

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Cold open: owner seated in their old cap, Shak writing on a card angled away.	None.	Pen on card, room tone. Text: "Guessing why they stopped wearing it." The card isn't readable.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
2–6s	Back to the real start. The owner takes the cap out of their own bag and puts it on the way they used to. The table is bare.	Shak, when it goes on or when they start to explain: "Don't tell me why yet."	This shows the hat arriving unseen. Lean disclosure lower third. No music.
6–18s	The look-over, at the profile marks. The owner stands there and Shak walks around them, stopping to ask before he touches anything. Close inserts show whatever he's actually looking at.	"Mind if I have a look?" / "Can I touch it?" Nothing that gives his guess away.	Inserts are cut to his eyeline, so the viewer gets the same evidence he does. Guess rule on screen: "One guess. One specific sentence. A one-word category like 'fit' or 'size' counts as a miss." The before frames are captured here but stay out of the cut unless the fix is to the strap.
18–22s	At the table, Shak finishes writing and puts the card face down on its gaffer mark. His hand comes off it.	None needed.	Pick up from the frame after the cold open. The locked wide keeps the card in shot from here until the flip.
22–44s	The conversation. The owner explains in their own words. Shak listens and follows up.	"Alright. Why'd you stop wearing this one?" Then: "How long have you had it?" "When did you last wear it?" "What did you wear instead?"	Let it run, and cut for length, never for direction. Captions use their exact words only. No music under the reason.
44–52s	The flip. The owner turns the card over and reads it out, then makes the call.	"Read it out." "Is that it? Yes, no or partly?"	Hold the card readable for at least 1.5s. On screen: "[Name]'s call: [their word]". Shak's reaction runs uncut.
52–68s	**One fix.** Shak says what he'd try and asks first, then does it or talks the owner through it with their own hands. If it's the strap, the owner steps back onto the marks for the after frames.	"Can I try one thing?"	For a strap fix, run a before/after wipe at 90° and 0°, each held for at least 2s, with a label written from the footage, e.g. "Loosened [n] notches. [What moved, or 'barely moved']". Any other fix is covered at the table, with no profile set in the cut.
68–78s	The check. The owner uses a mirror or their own phone, whichever they'd normally use.	"Would you wear it out now?"	Their full answer, including a no.
78–88s	The decision. The cap stays on, or it goes back in the bag.	"So where's it going?"	End on the action. Optional, if the format recurs: "Shak's calls: [x] of [n]". No sting, no end card.
+10–15s, only if asked	LRGR try-on, after the owner has decided on their own hat. The helper brings it in from off set.	"Set it how you like it." "What do you reckon?"	On screen: "[Name] wore this hat earlier in the shoot." Their verdict stays in either way. Finish on a one-second wide showing where their own hat ended up.

SHAK'S ROLE

- **What he's doing:** Looking at someone else's cap the way he'd look at any cap ("Doesn't matter whose"). He commits to one specific guess in writing, makes one fix, then accepts the owner's call.
- **Who he's speaking to:** The owner only. The viewer is overhearing. No summary to the lens, no wrap-up line.
- **Tone:** Whatever his natural register is. We're not asking for a persona, and nobody has confirmed what his on-camera style is. The aim is a conversation with someone about their own hat.
- **His rules (agree them at the pre-interview, don't rehearse them):**
- Ask before touching.
- Don't narrate the guess during the look-over, because that gives it away.
- One guess, one sentence, specific. Once the card is face down it isn't touched.
- One fix. If he thinks it can't be fixed, he says so rather than forcing one.
- The fix is done to their hat. Don't mention LRGR.
- If the owner asks to try an LRGR hat before deciding on their own, he holds it until after the decision, e.g. "Yeah, after you've decided on yours."
- No knocking the other brand and no naming it. Anything he says about the cap is his read of how it's sitting, never a claim about its materials or how it was made.
- If he's wrong, react however he reacts. No retakes of the flip.
- Let silences sit. Don't fill the gap after "Would you wear it out now?"
- **Starting-point lines** (his words, or none): "Don't tell me why yet." / "Mind if I have a look?" / "Can I try one thing?" / "Would you wear it out now?"
- **Pre-interview questions (a week out, not about this hat):**
- "When you look at someone else's cap, what do you notice first?"
- "Is there anything you won't do to someone else's hat?"
- "Are you happy to be wrong on camera, and for that to go out?"
- **Off-camera questions (the producer asks after the decision, with the owner off set):**
- "What made you write that?"
- "What did you see first?"
- "When they told you why, what went through your head?"
- "Why that fix and not another one?"
- "Did it do what you thought it would?"
- "What would you tell them to check next time they buy a cap, any brand?"

Use these only as short voiceover where they explain something already on screen. Never use them to add a claim.

PAYOFF AND ENDING

There are two payoffs. The first comes mid-video: whether Shak called it, in the owner's own word. The second is the ending: the owner's decision, shown as an action, with the cap staying on as they walk out of frame or going back in the bag. - No call to action, no "link in bio", no closing line from Shak to camera. - A "keep your hat, wear it like this" ending is the post as it stands, and nothing gets added to steer it towards LRGR. - If a try-on happened, the video ends on their verdict and then a one-second wide of where their own cap ended up. - **Caption:** plain description, e.g. "[Name] brought a cap they'd stopped wearing. Shak got one guess and one fix." Don't generalise from one person.

6

SHOOT PLAN

What Goes First?

THE IDEA

Two LRGR hats come from one batch that LRGR confirms. The wearer picks them, and a coin decides which one gets worn. The other is sealed in a box with Shak's signature across the tape. That's the untouched control.

Before any wear, Shak and the wearer each write down which part they reckon goes first and roughly when. Each reads their card to camera. The cards go on screen and are then sealed in an envelope taped to the box. The predictions are public from Ep. 0, so the viewer can take a side. The envelope only stops anyone rewriting them.

The wearer logs 30 real wears and does checkpoints at 10 and 20 on a phone kit. At 30, the box is cut open and the worn hat goes next to its twin.

Takeaway: - **Ep. 0:** two specific calls on what wears first, one of them from the person behind the hat, and a set point when we find out. - **Finale:** what 30 logged wears did to one hat compared with its sealed twin, and whose call was right, even if neither was.

OPENING

- **Shot:** a locked vertical two-shot at chest height. Shak and the wearer stand shoulder to shoulder behind a table. The sealed box sits front and centre, with the signature across the tape facing the lens. Each holds an A5 prediction card at chest height, writing to camera. The cards have printed headers (GOES FIRST: / BY WEAR:) filled in with thick black marker in capitals, so they can be read on a phone.
- **Action:** both cards are already up at frame one, and both people are still.
- **Suggested dialogue (Shak; a starting point he says his way, or not at all):** "That's mine. No changing it at thirty."
- **On-screen text:** "WEAR 0 / 30" in the top third from frame one, in a counter style that every later episode reuses. No other text in the first two seconds, because the cards are the text.
- **Why it works before any explanation:** two people, a sealed, signed box and two written calls you want to read. It reads as a bet before anyone says what the bet is.

BEAT BY BEAT

Ep. 0 (target 16–18s, hard limit 20s)

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Opening two-shot: cards up, sealed box between them.	Shak: "That's mine. No changing it at thirty." (starting point)	"WEAR 0 / 30" from frame one. Lavs and room sound only. No music under any spoken line.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
2–4s	Top-down: the batch the LRGR helper laid out. The wearer's hands take two.	None	Super “Two from the same batch” only if LRGR confirms it in writing. Otherwise state only what's confirmed (e.g. “Same model, same colourway”).
4–6s	Mid-shot: the producer calls, tosses, and the coin lands on the table. Cut to one hat going into the box.	Producer, off camera, before the toss: “Heads, [left] gets worn.”	Super: “Coin picks which one gets worn.” Keep the coin landing in shot. That's the fairness beat.
6–8s	Macro: lid down, tape across the seam, Shak signs and dates across it.	None	Tape tear and marker squeak up in the mix.
8–10.5s	The wearer reads their card. Cut to the card flat on the table, top-down.	The wearer reads the card as written.	Typed super: “[First name]: [part], by wear [x]”. Use the read as recorded, with no trims that change the meaning.
10.5–13s	Shak reads his card. Card insert. Any real reaction to the wearer's call stays in.	Shak reads the card as written.	Typed super: “Shak: [part], by wear [x]”. Both supers stay stacked to the end.
13–14.5s	Top-down: both cards into the envelope, flap signed by both, envelope taped to the box.	None	Hard cut. No transition effects.
14.5–16.5s	Locked wide: the wearer puts the worn hat on and walks out of frame. The box stays on the table.	None	Definition card, held at least 2s: “1 wear = [confirmed definition, e.g. 2+ hrs out of the house]. Logged every time. No special care.”
16.5–18s	The same wide holds on the box alone.	None	End supers: both calls stacked, then “WEAR 0 / 30 · Next check: wear 10”. Cut on the hold, with no sting.

Checkpoints at wears 10 and 20 (about 15s each; the wearer shoots on the phone kit)

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–2s	Phone-kit front frame of the worn hat on its marks, wiping from the wear-0 phone frame.	None	“WEAR 10 / 30” (or 20) in the Ep. 0 counter style. Wipe left to right and pause at both ends.
2–8s	Macro wipes (wear 0 to now, about 2s each): the two predicted parts first, then any other part that visibly changed.	None	Super on each predicted part: “Shak's call” / “[Name]'s call”. Captions say only what the frame shows. “No visible change yet” is a valid caption. All seven frames go in the carousel.

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
8–11s	The producer's dated photo of the sealed box, signature intact. Log summary card.	None	Card: "[10] wears · [x] hrs logged · [first date]–[latest date]".
11–15s	The wearer in a mid-shot, phone on a stand.	"Anything you've noticed since the last check?" Their answer as given.	Close mic. End super: "Next check: wear 20" or "Wear 30: the box opens."

Wear 30 finale (45–60s; a 10x session with Shak and the wearer)

APPROXIMATE TIME	VISUAL/ACTION	DIALOGUE OR TALKING PROMPT	EDIT/AUDIO NOTE
0–3s	Close: the sealed box, signature and envelope intact, a blade at the tape.	None	"WEAR 30 / 30". Hold on the signature long enough to read it.
3–8s	The box is cut open and the twin lifted out. The worn hat comes off the wearer's head (or out of their bag) as it is.	Only reactions nobody asked for.	No brushing, reshaping or cleaning of either hat before the frames.
8–15s	Both hats in one frame under the same light: front, then top-down, with a grey card in shot.	To both: "What do you see?"	Same grade on both, with no local adjustments to either hat. This is the main evidence shot.
15–30s	The five macros, worn next to twin, in a fixed order: brim edge, crown front, embroidery, sweatband, strap. A quick wipe from wear 0 wherever something changed.	Talk-over from the wearer and Shak as it happened.	Stacked split at identical scale. Hold each at least 2s. Captions name what's visible, not causes.
30–40s	The envelope is cut open, and each person reads their own card.	Each reads their card.	Bring back the Ep. 0 card supers and flag the matching macro.
40–55s	Two-shot over both hats.	"Whose call was closer? What do you make of that?"	End on Shak's response with both hats in frame. A plain final super states the result (see G).

SHAK'S ROLE

- **What he's doing:** committing, on record, to a call about his own hat, in front of the person whose wears will prove it right or wrong. He doesn't choose the hats or decide which one is worn, and he doesn't see the wearer's card before he writes his own.
- **Who he's speaking to:** the wearer while they write and after they read. The lens when he reads his card: it's a statement for the record, so speaking straight to camera works here.
- **Tone:** plain and specific. A bet, not a pitch, in whatever words he'd actually use.
- **The card:** one named part and one rough wear number.

- If he genuinely thinks nothing will show by 30, he still names the part he reckons goes first and writes “after 30”. That's still a call, and it doesn't play as a durability claim.
- Vague answers (“nothing”, “the whole thing”) don't count.
- **Off limits on camera:** materials, how or where the hat is made, care advice, and how long it will last. None of these are confirmed. He gives the wearer no instructions on looking after the hat.
- **Starting points only:** “That's mine. No changing it at thirty.” / “[Part]. Around wear [x].”

Off-camera questions (asked before he writes, so he thinks it through before committing): - “On caps you've worn yourself, what's usually gone first?” - “Look this one over. Which bit are you least sure about?” - “What would it have to look like before you'd say it's gone?” - “Roughly when? Pick a number.”

After the wearer reads: - “What do you make of their call?”

At wear 30: - Before the cut: “Still back your call?” - After: “Whose call was closer?” and “Anything there you didn't expect?” - “Would you change anything on the next run because of this?” Keep his answer only if it describes a real decision.

PAYOFF AND ENDING

- **Ep. 0:** ends on the bet itself. Both calls are on screen, the worn hat walks out of frame, the sealed box stays put, and the last super reads “Next check: wear 10.” That's a real test still to come, so no call to action is needed. The caption carries the wear definition, the rules and the baseline carousel.
- **Checkpoints:** end on the wearer's own words and the number of the next checkpoint. If nothing shows, the episode says so.
- **Wear 30:**
- Ends on Shak's response, with worn and twin held side by side.
- A plain final super: “[Part] showed first, at wear [x]. [Name] called it.” or “No visible change at 30 in these frames. Neither call landed.”
- Then: “One hat. One wearer. 30 logged wears. Informal.”
- No shop link in the video. If the account wants one, it goes in the caption.

SHOOT DAY

How the day runs.

TIME	BLOCK	CONCEPTS	WHO	NOTES
07:30–09:00	Load-in and build	All	Crew	Build and light all three spaces. Lock the profile set, record the continuity sheet. Producer tapes the Red or Blue? caps and does the coin toss for order off camera. Decoys go into opaque bags. Rig check on the Tug Count locked camera.
09:00–09:20	Participant arrival	,	Participant, producer	Releases and lav. Neutral briefing: "We're filming you trying some caps and doing an hour of [activity]." No brand talk. Shak stays out of sight.
09:20–10:50	Red or Blue? Part 1	Red or Blue?	Participant, producer, shooter	Mirror pick, then locked side and back frames, the stacked split on the laptop, then the second pick. Overlay check between each hat change. Picks are recorded once and never repeated.
10:50–11:00	Break and reset	,	All	Retag the two caps "1" and "2" for The Tug Count. Shak signs the draw margin on camera.
11:00–12:15	Parallel block	The Tug Count (activity space) + Ours Or Not? and Shak's half of Mark It Up (tabletop)	Participant + helper / Shak + producer + shooter	Tug Count: four 15-min blocks A-B-B-A on the locked rig, helper clicking. Tabletop: Ours Or Not? (about 45 min for six rounds, read-out and score guess), then Shak's three strips (about 30 min). If the tabletop overruns, Shak's strips move to after lunch (+30 min).
12:15–12:30	Tug Count wrap	The Tug Count	Helper, shooter	Stop the rigs, offload and back up to two drives. Remove the tags.
12:30–12:50	Tape-off	Red or Blue? Part 2	Shak, participant	On the locked profile set. Shak hears the picks for the first time and peels the tape himself.
12:50–13:35	Lunch	,	All	Card backup number 1.
13:35–14:20	Ep. 0	What Goes First?	Shak, series wearer	Batch pick, coin toss, cards written and read, setup-sheet record shoot, box sealing. Lean: the participant is the series wearer (disclosed), or Shak is, if no one else is committed.
14:20–14:50	Wearer's half and reveal	Mark It Up	Participant, then Shak	The participant places three strips with Shak out of the room. Then the single cover lift with both in frame.

TIME	BLOCK	CONCEPTS	WHO	NOTES
14:50–15:00	Break	,	All	Reset the table and chairs for The Drawer Hat. Swap lavs.
15:00–16:00	Conversation	The Drawer Hat	Shak, participant	The participant's own cap from their bag. Allow the full hour because the guess, reason, flip and fix need room. Before-and-after on the profile marks only if the fix needs it. Fallback: the daily-hat episode.
16:00–16:30	Pickups	All	Shak, shooter	Macros, hand inserts, box and tape details, Shak's off-camera answers, and room tone in each space.
16:30–17:00	Buffer	,	,	Absorbs overruns. If unused, film Can't Unsee It (only if the pre-interview turned up real pet hates).
17:00–17:45	Pack down	,	Crew	Final double backup, label cards, return LRGR stock, bag and label the decoys.

What the lean day completes: - All six concepts, which is seven posts once Red or Blue? Part 2 is counted. - The Tug Count's blind recount happens in post. - What Goes First? checkpoints at wears 10 and 20 are shot later on the phone kit.

Day length and footage: about 10 hours on site, with roughly 3–4 hours of usable raw footage.

What gets cut or deferred if the day is short: - **No helper or no second rig:** The Tug Count can't run alongside the tabletop. Move it to its own session on the wearer's time (phone on a tripod, helper clicking) and the day carries five. This saves about 1.25 hours. - **Running over at 15:00:** The Drawer Hat moves to its own short session with a real owner. Never rush it. - **The cost:** one participant appears in four of the six videos. Disclose any link to LRGR or the crew once per video, and space their videos apart when posting (order in section 4).

BIGGER VERSION

With four to six people.

Same build, rules and locked set. Participants get staggered call times so nobody waits around for more than about 20 minutes, and nobody who is meant to be blind sees anything before their block. Add one extra crew member (a runner or a second producer) to manage the participants, their releases and keeping the blind participant blind.

TIME	BLOCK	CONCEPTS	WHO	NOTES
07:30–09:00	Load-in and build	All	Crew	As lean. Also measure and log the hat's notch ladder for Will It Do Up? on the tabletop, with the method shown on camera.
09:00–12:50	Core morning	Red or Blue?, The Tug Count, Ours Or Not?, Shak's half of Mark It Up, tape-off	P1 (blind wearer), Shak	Same as lean, 09:00–12:50.
12:50–13:35	Lunch	,	All	Backup number 1. P2 and P3 arrive at 13:20 and wait in a holding area away from the sets.
13:35–14:20	Ep. 0	What Goes First?	Shak, P2 (named series wearer)	P2 is someone who wears a cap most days, committed in advance to 30 logged wears.
14:20–14:50	Wearer's half and reveal	Mark It Up	P1	P1 stays because they're the one who has worn the hat. If a real LRGR customer can attend with their own hat, they can take this instead, with the reason disclosed.
14:50–15:50	Conversation	The Drawer Hat	Shak, P3 (a real drawer-hat owner who hasn't worn LRGR)	Allow the full hour.
15:50–16:00	Break	,	All	P4–P6 arrive and sit away from the set. Reset for the group.
16:00–17:15	Group block	Shak's Bet, then Will It Do Up?	Shak, P4–P6	Shak's Bet first (chats one at a time, coin under a cup, verdicts, cup lift): about 45 min. Then Will It Do Up? with the same three heads (tape call against the person's own strap choice): about 30 min. Shak's Bet needs three people who have their own everyday caps.
17:15–17:45	Pickups	All	Shak, shooter	As lean, kept tight.
17:45–18:30	Pack down	,	Crew	Final double backup.

What the expanded day completes: - The six, plus Shak's Bet and Will It Do Up?: eight concepts, nine posts. - One participant now appears in only two or three videos instead of four.

Day length: about 11 hours on site, which is long. Two options: - **Split it (recommended):** run the lean day, then a half-day group session (The Drawer Hat, Shak's Bet and Will It Do Up?) on another date. - **Keep it to one day:** drop the 30-minute buffer only if the morning finishes on time.

BEFORE WE FILM

What we need from you.

Before we lock the ideas

1. **You sign off that results go out as filmed** in all six: a pick or count that goes against LRGR, a miss in Ours Or Not?, orange tape on his own hat, visible wear in What Goes First?, and a "keep your hat" ending in The Drawer Hat. If you decline one, that slot gets re-planned (section 4) before anything is booked.
2. **Which hat model is the hero for this shoot,** and that six to eight units can be set aside: one for Red or Blue? and The Tug Count, two or three for the Ours Or Not? pool, a stock box for Mark It Up, and at least two from one batch for What Goes First?.
3. **Whether LRGR can confirm two or more hats came from the same batch** (an order or batch record). Without that, What Goes First? runs against its Ep. 0 setup sheet instead of a sealed twin.
4. **Whether you have genuine "I'd change this" answers** on his own hat, checked in a short pre-interview. If not, Mark It Up becomes wearer-led or swaps for In The Bag.
5. **How you prefer to work on camera:** answering someone off camera, talking straight to the lens, or a mix. This changes how the producer runs his prompts.

Before the shoot day

1. **The participant:** someone who wears caps, has never seen LRGR hats or content, is booked through the tape-off, and has any link to LRGR or the crew disclosed. Their real everyday activity for The Tug Count, and whether they own a cap they stopped wearing.
2. **The series wearer and log keeper** for What Goes First?, named before the shoot and committed to 30 logged wears.
3. **Location:** three areas, with the Tug Count space out of earshot of the tabletop.
4. **Crew:** an LRGR helper for the full day, and a 10x producer.
5. **Care instructions** for the hero hat, so What Goes First? doesn't wash, clean or store it in a way LRGR wouldn't recommend.
6. **Signed releases** for every participant, including on-screen measurements (Will It Do Up?) and their own caps (The Drawer Hat).
7. **A blind recounter** for The Tug Count with no link to LRGR or 10x's work on the account.

Nice to have

- Whether a real development sample, rejected version or documented revision exists. That unlocks The One I Knocked Back.
- Upcoming drops and whether every colourway shares the same pattern. That unlocks Shape First.
- your real pet hates about how people wear caps, for Can't Unsee It.
- Where the hats are made, only so we never imply anything wrong. It doesn't need to appear in any video.
- Any existing LRGR customers who'd come in with their own hat (for the expanded Mark It Up).

NEXT STEP

Pick your six.

Keep the ones that feel like you, drop the ones that don't, and send Hunter your picks with anything you can tick off above. Then we lock the shoot day.
