FITS AROUND. SITS DOWN.

Twelve video ideas for LRGR hats, six picked for the first shoot, and a plan to film all six in one day. Every idea shows people something they can see for themselves instead of telling them the hat is good.

FOR: SHAK
FORMAT: 9:16 REELS / TIKTOK / SHORTS
OCTOBER 2026

Strap at the same snug setting on both. Loosening the strap changes how big the hat is around your head. It doesn't make the crown any deeper. You only see that from the side.

THE BIG IDEA

SHOW THE SIDE, NOT THE FRONT

Most hat content is filmed from the front, and from the front almost every hat looks fine. The problems people actually describe show up from the side: the hat fits around the head but sits up high, they keep pulling it down, and it looks off in photos their mates take.

So the camera goes where the problem is. A locked-off side profile, the same head, the same light, and the viewer judges the difference for themselves. Shak is the person who shows you what to look for in a hat. He doesn't have to sell it. He points at what he notices, says what bugs him, and is upfront about who the shape isn't for.

Everything here runs on one rule: **proof over promises.** We film the result, whatever it is.

THE HAT TEST

Real-world use, real outcome.

BUILT FOR US

Who it's for and the decisions behind it.

SIDE BY SIDE

Fair, visible, same-frame comparisons.

12 CONCEPTS

THE IDEAS

01 · Side by Side

SHOOT 1

FITS AROUND. DOESN'T SIT DOWN.

On one head, a shallow cap is fitted snug, then loosened, then put next to the LRGR A-frame in profile. It shows that loosening the strap changes how big the hat is around your head, not how deep the crown is.

FIRST 2 SECONDS

Tight side profile of a cap sitting high, with a clear gap above the ear.

"This fits his head. It just doesn't sit on it."

THE ITCH	"It fits. So why does it look wrong?"
WHAT HAPPENS	Snug the shallow cap → fixed side shot → loosen two notches (it drops a little and goes loose) → the LRGR hat at the same snug fit, same side shot.
VIEWER GETS	If your hat sits high, it's crown depth, not size. Loosening won't fix it.
WHY LRGR	Turns the most common fit complaint into something you can see in three seconds.
NEED FIRST	One shallow comparison cap, and a wearer where the difference actually shows (tested before rolling).

02 · Side by Side

SHOOT 1

SAME HEAD. SAME CAMERA. TWO PROFILES.

A locked tripod and tape marks on the floor, one wearer, two hats, front, side and back. Shown as a split screen so the viewer judges the difference.

FIRST 2 SECONDS

Split screen: the same face in side profile, two different hats.

"Same head, same camera, same spot. Only thing that changes is the hat."

THE ITCH	"What does a deeper crown actually look like on a person?"
WHAT HAPPENS	The wearer turns 0° / 90° / 180° in hat A, then repeats in hat B. Nothing about the camera or light moves. Both hats are adjusted the way the wearer likes them.
VIEWER GETS	A clear, fair look at how each hat sits. The viewer picks.
WHY LRGR	Proof over promises in its simplest form, and it becomes a repeatable format.
NEED FIRST	One comparison cap, named on screen.

03 · Built For Us

THE DRAWER HAT

Someone brings in a hat they bought and stopped wearing. They explain why, Shak looks at the fit, and then they try an LRGR hat. Whatever they think, it stays in.

FIRST 2 SECONDS

Hands drop a worn cap on the table next to an LRGR hat.

"Alright. Why'd you stop wearing this one?"

THE ITCH	"I paid for it and it just lives in the drawer."
WHAT HAPPENS	A chat across the table. They put their own hat on and Shak points out what he sees from the side. They swap to LRGR and we film front and side. They give an honest verdict.
VIEWER GETS	A specific, recognisable reason hats go unworn, and whether a different shape fixes it.
WHY LRGR	Starts from a real frustration. Shak's eye for fit comes through naturally.
NEED FIRST	Real people with a real unworn hat. The outcome isn't cast.

04 · Built For Us

SHOOT 1

WHO IT'S NOT FOR

Shak names the fit preferences the LRGR shape won't suit, and shows it on someone who prefers a shallower hat.

FIRST 2 SECONDS

Shak lifts the LRGR hat off a wearer and hands them a lower cap.

"Honestly? If you like it sitting up top, ours probably isn't it."

THE ITCH	"Is a deep A-frame actually right for me?"
WHAT HAPPENS	The wearer tries the LRGR hat and Shak points out where it sits differently from what they like. They swap to the shallower cap and explain why they prefer it. Shak says who the LRGR shape is built for.
VIEWER GETS	Viewers know straight away whether this is their hat.
WHY LRGR	A founder saying who shouldn't buy is rare, and it makes everything else Shak says believable.
NEED FIRST	A wearer who genuinely prefers a shallow fit, and Shak's real opinion.

05 · Hat Test

THE TUG COUNT

A mate clicks a tally counter every time the wearer reaches up to fix their hat during the same 30-minute everyday routine. One session per hat.

FIRST 2 SECONDS

Close-up: a thumb clicks a tally counter as a hand tugs a brim.

"Every time he touches it, I click."

THE ITCH	"Why am I always pulling my cap down?"
WHAT HAPPENS	The same walk, coffee run and drive on two similar days. A wide fixed camera, rules for what counts set before filming, and both tallies revealed at the end.
VIEWER GETS	An informal, one-person look at how much each hat needs fixing, labelled as exactly that.
WHY LRGR	Makes comfort and fit something you can count and watch.
NEED FIRST	Two scheduled sessions. The result is whatever it is, even a draw.

06 · Hat Test

SHOOT 1

30 WEARS. ONE HAT.

One hat, logged on every real wear, inspected at wear 0, 10, 20 and 30 with identical framing.

FIRST 2 SECONDS

A fresh hat on a turntable, with "WEAR 0 / 30" on screen.

"Wearing this one, nothing else, thirty times. Here's day one."

THE ITCH	"What does it look like after I actually wear it?"
WHAT HAPPENS	Baseline macros of the brim curve, crown shape, embroidery, sweatband and strap. A quick selfie on each wear day with a dated log. Re-inspected at each checkpoint on the same marks.
VIEWER GETS	Real ownership evidence, shown over time.
WHY LRGR	A recurring series with built-in continuity that gives people a reason to follow.
NEED FIRST	A dedicated hat (marked inside), and someone who keeps the wear log.

07 · Built For Us

SHOOT 1

EVERY PART, WHAT IT'S FOR

Shak goes through the hat one detail at a time and says what each part does for fit, look or use.

FIRST 2 SECONDS

Macro: a thumb pressing the crown structure from the inside.

"Forget the logo for a sec. This is the bit that matters."

THE ITCH	"What actually makes one cap better than another?"
WHAT HAPPENS	Crown depth measured with a tape, brim curve, snapback, 3D embroidery, sweatband, then back on the head in profile. One plain sentence on each.
VIEWER GETS	What each part of the hat is there for, in plain words.
WHY LRGR	Talks about the product the way a maker would, with no luxury language and no digs at anyone else.
NEED FIRST	Confirmed materials and measurements.

08 · Built For Us

THE SAMPLE I SENT BACK

Shak puts a rejected sample next to the final hat and explains the one detail he wouldn't let go.

FIRST 2 SECONDS

Two near-identical hats, one with tape marking the problem.

"Sent this one back. Everyone reckoned I was being picky."

THE ITCH	"Does anyone actually care about this stuff?"
WHAT HAPPENS	Side by side: Shak points at the difference, why it mattered, and what fixing it took.
VIEWER GETS	The shape came from specific decisions, not a catalogue.
WHY LRGR	Shows Shak's standards through one concrete story instead of a founder-journey monologue.
NEED FIRST	Only works if a real sample or revision exists.

09 · Side by Side

SHOOT 1

ONE HAT. SIX HEADS.

The same LRGR hat on 4–6 people, with each person's head measurement, strap setting and an honest verdict on screen. Mixed opinions stay in.

FIRST 2 SECONDS

A grid of four side profiles, all in the same hat.

"Same hat, six heads. Not everyone was into it."

THE ITCH	"Will it look like that on me?"
WHAT HAPPENS	Each person is measured, puts the hat on, and is filmed in a fixed front and side shot. The strap notch is logged and they give one line on it.
VIEWER GETS	A real fit reference. Find the head most like yours.
WHY LRGR	An honest fit guide that buyers will come back to, not a reaction montage.
NEED FIRST	A range of head sizes, and releases that cover showing measurements.

10 · Side by Side

BRAND NEW VS MINE

A new LRGR hat next to Shak's own well-worn one of the same model.

FIRST 2 SECONDS

Two hats on a table, one crisp and one clearly lived in.

"This one's new. This one's mine."

THE ITCH	"Will it hold its shape?"
WHAT HAPPENS	Matching macros of the brim, crown, sweatband, embroidery and strap. Then both on the same head in profile.
VIEWER GETS	How this hat has actually aged under real use.
WHY LRGR	Ownership evidence Shak already has, with no staging.
NEED FIRST	A genuinely worn hat of the same model, and how long it's been worn.

11 · Hat Test

MIRROR SAYS YES

A wearer approves a hat in the mirror, then sees the side photo a mate snapped without warning.

FIRST 2 SECONDS

Front-on mirror shot, the wearer nodding at their reflection.

"Mirror says yes. Now check the side."

THE ITCH	"Looked fine in the mirror. Then I saw the photo."
WHAT HAPPENS	Mirror shot in hat A, then a hard cut to the mate's phone photo from the side. Repeat in the LRGR hat at the same angle.
VIEWER GETS	Always check a hat from the side before you buy it.
WHY LRGR	Leads with a buying tip everyone recognises, and the product follows.
NEED FIRST	One comparison cap and a willing wearer.

12 · Built For Us

THREE CHECKS BEFORE YOU BUY

Shak's quick routine for any hat in any shop: where the brim sits against your brow, the gap above the ear, and the pull-down test.

FIRST 2 SECONDS

A finger traces the line from brim to ear on a side profile.

"Three things I check on any hat. Doesn't matter whose."

THE ITCH	"How do I know before I pay for it?"
WHAT HAPPENS	Each check demonstrated on a shallow cap and an LRGR hat. It ends on: "Neither's wrong. Depends how you like it."
VIEWER GETS	A checklist people can use in any shop.
WHY LRGR	Makes Shak the go-to person for hat fit, beyond his own brand.
NEED FIRST	Shak's real checks, in his own words.

RECOMMENDATION

SIX FOR THE FIRST SHOOT

Ranked on how fast the opening reads, how clearly the difference shows on screen, how much of Shak comes through, and how easy it is to film. All six can be shot in one day on one set. Swap any of them out; this is your call.

	CONCEPT	WHY IT'S IN	WHAT IT NEEDS
1	**SAME HEAD. SAME CAMERA. TWO PROFILES.**	Split profile reads instantly. The difference is as visible as it gets. One setup.	One comparison cap
2	**FITS AROUND. DOESN'T SIT DOWN.**	The gap above the ear is the hook. It explains the problem everyone has. Same set as #1.	One shallow cap, a wearer it shows on
3	**ONE HAT. SIX HEADS.**	Grid opener. Real data across head sizes. Shows how Shak handles mixed verdicts.	4–6 wearers, a tape
4	**WHO IT'S NOT FOR**	Unexpected from a founder. Shak's honesty is the content.	A wearer who likes a shallow fit
5	**EVERY PART, WHAT IT'S FOR**	Strong macro visuals. Shak talking like a maker. Tabletop, so it's easy.	Confirmed materials and measurements
6	**30 WEARS. ONE HAT.**	Starts a series people follow. Only the baseline gets filmed on the day.	A dedicated hat and a wear log

SHOOT-READY

HOW WE FILM EACH ONE

Open any concept for the full plan: opening, beat-by-beat timing, shot list, questions for Shak, the ending, and what the video does and doesn't prove. Shak never needs a script. Someone off camera asks the questions and he answers them in his own words.

1 SAME HEAD. SAME CAMERA. TWO PROFILES.

~35s · Side by Side

One wearer, one locked camera, two hats, three angles. The viewer sees how each hat sits from the side and back, and decides. Takeaway: judge a hat from the side, not just the front.

OPENING

ON-SCREEN TEXT

Split screen: the same face in side profile, two different hats.

"Same head, same camera, same spot. Only thing that changes is the hat."

"Same head. Two hats." with small labels naming each hat.

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT ESTABLISHES
0–2s	Split side profiles	Opening line	The comparison
2–7s	Wide: tripod, tape marks, wearer sitting	"Tripod hasn't moved. He's set both how he likes."	It's fair
7–17s	Front A vs B, then side A vs B	Shak on the brim line and the gap above the ear	The difference
17–25s	Back A vs B	How far each one comes down at the back	The full picture
25–32s	The wearer picks	Their preference and why	Preference, kept honest
32–36s	Shak	"Which side looks like how you want it to sit?"	A real question

SHOT LIST

ESSENTIAL

- Locked 35mm head-height shots at 0°, 90° and 180°, in both hats
- A wide that proves the camera didn't move
- Both hats adjusted on camera to the wearer's preference

OPTIONAL

- 85mm crown macros off the head
- Top-down of both hats side by side

QUESTIONS FOR SHAK (OFF CAMERA)

- What's the first thing you notice from the side?
- Where's each one sitting against his ears?
- Would you ever wear the other one? When?
- Who'd actually prefer hat A?

EDIT

Stacked split for 9:16, identical scale and grade on both halves. Hold each angle 2s or more. An optional matching guide line at eyebrow height.

ENDING

Audience question: "Which one sits how you like it?" It's genuine, because both answers are valid.

KEEPING IT HONEST

Shows: How two specific hats sit on one specific head.

Doesn't show: Comfort, durability, or how they sit on every head.

Watch for: A mismatched lens or crop, or a comparison hat set up to look bad. Name the comparison, and keep the result if the wearer prefers hat A.

2 FITS AROUND. DOESN'T SIT DOWN.

~30s · Side by Side

Shows why 'just loosen it' doesn't fix a hat that sits high. Takeaway: circumference and depth are different things, so check the depth.

OPENING

Tight side profile of a cap sitting high, with a clear gap above the ear.

"This fits his head. It just doesn't sit on it."

ON-SCREEN TEXT

"Fits around ≠ sits down"

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT ESTABLISHES
0–3s	Side profile with the gap	Opening line	The problem
3–9s	Strap snug, wearer pulls it down, it rides back up	"Snug all the way round."	It fits around
9–16s	Loosened two notches, same profile	"Loosen it, drops a bit, but now it's loose."	The usual fix fails
16–25s	Back to snug, then the LRGR hat at the same snug fit	"Same fit around. Deeper crown."	The depth difference
25–30s	A/B side freeze	"If yours sits like the left, it's depth, not size."	The takeaway

SHOT LIST

ESSENTIAL

- Locked 35mm side profile
- 85mm close-up of the strap notches changing

QUESTIONS FOR SHAK (OFF CAMERA)

- What do people usually do when a hat sits high?
- Does loosening help? Why not?

- The hat pulled down and riding back up

OPTIONAL

- A tape measuring crown depth on both hats

- Who does a shallow crown actually suit?

EDIT

A notch overlay ("Notch 4 → Notch 6"). Identical profile framing in every beat, and an optional guide line above the ear.

ENDING

Buying takeaway: "Check depth, not just size."

KEEPING IT HONEST

Shows: On this head, loosening didn't bring that cap down meaningfully.

Doesn't show: Every shallow cap, or every head.

Watch for: Over-tightening the comparison. Don't add any 'fits everyone' text.

3 ONE HAT. SIX HEADS.

~50s · Side by Side

A fit reference: the same LRGR hat on 4–6 people with measurements and honest verdicts on screen. Takeaway: find the head that's most like yours.

OPENING

A grid of four side profiles, all in the same hat.

"Same hat, six heads. Not everyone was into it."

ON-SCREEN TEXT

"1 hat · 6 heads · real opinions". Each person gets a card like "58cm · notch 5 · 'Sits right'"

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT ESTABLISHES
0–3s	2×2 grid of side profiles	Opening line	The format
3–8s each	Tape around the head → hat on → front and side	The wearer's one-liner	Data plus preference
Last 8s	The grid again, labelled	What Shak noticed across them	A pattern, no overclaiming

SHOT LIST

ESSENTIAL

- A tape close-up for each person

QUESTIONS FOR SHAK (OFF CAMERA)

- How do you normally like a hat to sit?
- Better or worse than what you usually wear?

- A strap-notch close-up
- Locked front and side shots
- The verdict line

OPTIONAL

- A group shot
- Shak adjusting a hat on someone

- (To Shak) Anyone surprise you?
- Who didn't it suit, and why?

EDIT

Identical framing for every person. Keep the negative verdicts in, and don't save them for a punchline.

ENDING

"Tell me your head size and I'll tell you who's closest." Only if Shak will actually reply. Otherwise end on the grid.

KEEPING IT HONEST

Shows: How one model sat on these particular people.

Doesn't show: A universal fit, or long-term comfort.

Watch for: Cutting the negative verdicts, or only picking heads it suits.

4 WHO IT'S NOT FOR

~25s · Built For Us

Shak openly says who the LRGR shape isn't for, and shows it. Takeaway: buyers can tell straight away if it's their hat, and they trust everything else Shak says.

OPENING

Shak lifts the LRGR hat off a wearer and hands them a lower cap.

"Honestly? If you like it sitting up top, ours probably isn't it."

ON-SCREEN TEXT

Captions only.

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT ESTABLISHES
0–3s	The swap	Opening line	Honesty first
3–12s	Wearer in the LRGR hat, side view, Shak pointing	"See how it comes down over the ears? He doesn't want that."	The limit

TIME	WE SEE	WE HEAR	IT ESTABLISHES
12–20s	The shallower cap, side view	The wearer on why they prefer it	A different taste, respected
20–25s	Shak to camera	"If hats always sit too high on you, that's who ours is for."	Who it IS for

SHOT LIST

ESSENTIAL

- The swap
- Both side profiles
- Shak in medium close-up

OPTIONAL

- Shak's reaction while the wearer talks

QUESTIONS FOR SHAK (OFF CAMERA)

- Who's tried your hats and walked away? Why?
- What would you tell a mate who likes it sitting high?
- Ever thought about a shallower version?

EDIT

Few cuts. Let Shak's tone carry it, with no music sting or gotcha edit.

ENDING

Buying takeaway: who it's built for.

KEEPING IT HONEST

Shows: Shak's own view of where the hat fits and where it doesn't.

Doesn't show: A measured result.

Watch for: Turning the honesty into a humble-brag. Keep the limit real.

5 EVERY PART, WHAT IT'S FOR

~40s · Built For Us

A tabletop breakdown of each part of the hat and what it does. Takeaway: what you're actually getting, in plain words.

OPENING

Macro: a thumb pressing the crown structure from the inside.

"Forget the logo for a sec. This is the bit that matters."

ON-SCREEN TEXT

One label per detail, e.g. "Crown depth: [measured]cm".

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT ESTABLISHES
0–8s	Crown depth with a tape	Why that depth	Fit
8–15s	Brim curve	What the curve does	Look
15–22s	Snapback and notches	How it adjusts	Fit
22–30s	3D embroidery	Why it's raised (look only)	Detail
30–36s	Sweatband	What it's for	Wear
36–40s	On the head, side view	Closing line	The whole hat

SHOT LIST

ESSENTIAL

- An 85mm or macro shot of each detail on a neutral surface
- The tape reading in focus
- One on-head side profile

OPTIONAL

- Slider push-ins
- Top-down layout

QUESTIONS FOR SHAK (OFF CAMERA)

- Why that depth?
- What did you change on the brim?
- What's the 3D embroidery for?
- If you had to cut one thing, what would it be, and what wouldn't you touch?

EDIT

Hold each macro long enough to read the label. No 'premium' or 'luxury' overlays.

ENDING

Product action: "That's the A-frame. Link's there if it's your shape."

KEEPING IT HONEST

Shows: The features and what each is meant to do.

Doesn't show: Durability or performance.

Watch for: Saying embroidery proves quality, inventing materials, or knocking other brands.

6 30 WEARS. ONE HAT.

~25s (ep. 0) · Hat Test

The first episode of a documented wear series: today's video is the baseline and the rules. Takeaway: we'll show you, not tell you.

OPENING

A fresh hat on a turntable, with "WEAR 0 / 30" on screen.

"Wearing this one, nothing else, thirty times. Here's day one."

ON-SCREEN TEXT

"WEAR 0 / 30" (the counter stays the same across every episode).

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT ESTABLISHES
0–4s	Turntable	Opening line	The start
4–16s	Baseline macros of the brim, sweatband, embroidery and strap	Shak noting each one	The reference point
16–22s	Shak	The rules: one wearer, logged wears, no special care	It's fair
22–25s	The hat on	"Check back at ten."	A reason to follow

SHOT LIST

ESSENTIAL

- A turntable 360°
- Macros on marked, repeatable framing (note the lens, distance and light)
- Side profile on the head

OPTIONAL

- Top-down

QUESTIONS FOR SHAK (OFF CAMERA)

- What do you reckon goes first?
- What would count as it failing, for you?

EDIT

Identical framing every episode. Later episodes wipe from wear 0 to wear N.

ENDING

A real test still running, with check-ins at 10, 20 and 30.

KEEPING IT HONEST

Shows: How one hat holds up under real, logged wear.

Doesn't show: A lab test or every hat.

Watch for: Swapping in a fresh hat, skipping logged wears, or cleaning it without confirmed care instructions.

BATCH SHOOT

ONE DAY, ONE SET

Grouped so the camera barely moves. The locked side-profile set is built once and used for four concepts back to back.

08:30–10:00

TABLETOP + MACRO

Every Part, What It's For (all detail shots). 30 Wears baseline: turntable and macro inspection, with the framing recorded so every check-in matches. Shak only.

10:00–12:00

LOCKED PROFILE SET

Fits Around, Doesn't Sit Down, then Same Head, Two Profiles. One wearer. Exposure, white balance and camera position are set once and never touched.

12:30–14:30

SAME SET, MORE HEADS

One Hat, Six Heads (wearers in waves), then Who It's Not For with the wearer who likes a shallower fit.

14:30–15:30

SHAK'S CHAIR

Talking prompts for all six, pickups, and the rules for the 30-wear series.

15:30–16:00

OUTSIDE (OPTIONAL)

The hat worn naturally, and the first logged wear for the 30-wear series.

DONE ON THE DAY

Same Head Two Profiles · Fits Around · Six Heads · Who It's Not For · Every Part

NEEDS SOMETHING REAL

The Sample I Sent Back (a real sample) · Brand New vs Mine (a genuinely worn hat) · The Drawer Hat (real guests)

STARTS NOW, PAYS OFF LATER

30 Wears, One Hat (check-ins at 10, 20, 30) · The Tug Count (two scheduled sessions)

LEAN BASELINE KIT (TO CONFIRM)

One camera, a 35mm (or 24–70mm) and an 85mm lens, a tripod, two soft LED panels, a plain grey or off-white wall, a lav mic, a stool with tape marks for 0°/90°/180°, a soft measuring tape and a tally counter. Shak plus one helper, and four to six people with different head sizes.

BEFORE WE ROLL

WHAT WE NEED FROM YOU

- [ ] How you're most comfortable on camera: talking straight to the lens, or answering someone off camera
- [ ] The comparison caps, bought from a shop and named on screen, so it's fair
- [ ] Materials and care instructions, so we only say what's true
- [ ] Whether you've got a genuinely worn LRGR hat (and how long you've had it)
- [ ] Location for the day
- [ ] Which LRGR hats and colourways go in, and in what sizes
- [ ] 4–6 people with a range of head sizes, happy to sign a release
- [ ] Whether a real development sample or rejected version exists
- [ ] Where the hats are made, if it ever comes up
- [ ] Who wears the 30-wear hat and keeps the log

RESULTS ARE FILMED, NOT SCRIPTED

If the LRGR hat doesn't come out ahead in a comparison, we keep it in. That's what makes the rest believable.

FAIR COMPARISONS

Same camera, same light, same lens. Every hat is adjusted to how the wearer likes it, and nobody's hat is set up to look bad.

PREFERENCE ≠ PROOF

"I like it" and "it measures this" are labelled separately. An informal test is called an informal test.

NO CLAIMS WE CAN'T BACK

No waterproof, sweat-proof or wash claims, and no "built different", until it's verified.

NEXT STEP

PICK YOUR SIX

Go through the twelve, keep the ones that feel like you and drop any that don't. Tell Hunter which ones, and fill in anything you can from the checklist above. From there we'll lock in the shoot day.
