CREATIVE DEVELOPMENT BRIEF
Larger Than Life Apparel | Claude handoff

YOUR TASK
Develop distinctive, practical short-form video concepts for Larger Than Life Apparel, then turn the strongest concepts into shoot-ready execution plans. Use the research and territories below as starting points, not a list to simply reword. The content should feel like a real person demonstrating a product, not a marketing team trying to sound like streetwear culture. The central principle is proof over promises.

BRAND CONTEXT
Brand: Larger Than Life Apparel, publicly styled as LRGR Than Life Apparel.
Founder: Shak, who is also the face of the brand.
Category: Streetwear. Hero product: Hats, particularly deep-fitting A-frame hats.
Positioning: Quality and fit first. No hype.
Core belief: Streetwear should be built for the people actually wearing it.
Voice: Casual, direct, Australian. Natural rather than scripted or try-hard.

EXISTING CONTENT PILLARS
1. The Hat Test: Put the hat through relevant real-world use and show the outcome.
2. Streetwear Built For Us: Show who the product is for, which problems it addresses, and the real decisions behind it.
3. Side by Side Comparison: Demonstrate specific differences between products fairly and visibly.

INFORMATION STILL UNCONFIRMED
Shak's natural on-camera personality; audience age and primary city; main competitors; exact production resources, locations and talent; verified performance properties and care instructions.
Do not invent these details. Where they affect execution, state the assumption or identify what needs confirming.

RESEARCH CONTEXT
Public product descriptions emphasise a deep crown, curved brim, snapback strap and 3D embroidery. One listing explicitly frames the hat as suitable for people looking for a deeper fit. These are brand descriptions, not independently verified performance findings.
The previous research reported storefront prices of $49.99 for hats and $75 for T-shirts. Confirm current prices and currency before using them. These observations are not a guaranteed current price list.
Qualitative customer discussions surfaced these frustrations: a hat fits around the head but sits too high; loosening the adjustment does not solve a shallow crown; the wearer keeps pulling the hat down; it looks fine from the front but awkward from the side; some wearers dislike excess crown height or volume.
Treat these as creative insights, not statistical evidence about the entire audience.
Useful distinction: A hat fitting around your head is not necessarily the same as it sitting how you want on your head.
Do not conclude that deeper is always better or that one hat fits everyone.

CREATIVE DIRECTION
Make Shak the person who shows you what to look for in a hat, not another founder telling you his product is premium. The viewer should see the relevant difference, understand the test or recognise their own frustration. Reveal Shak's personality through what he notices, what annoys him, his honest reactions, his product decisions, and how he responds to someone whose preference differs from his. Do not manufacture a loud, comedic or motivational persona.

STARTING TERRITORIES
Improve, combine or replace these where you have a stronger idea.

1. Fits around. Doesn't fit down.
Show a hat that fits the wearer's circumference but sits too high. Demonstrate what loosening the adjustment changes, then compare profiles. Opportunity: Explain a recognisable fit problem visually.

2. Bring the hat you never wear.
Someone brings a hat they bought but stopped wearing. They explain why, show the fit, then try an alternative. Opportunity: Start with a real frustration rather than a staged endorsement.

3. Same head. Same camera. Two profiles.
Compare two hats on the same wearer using a fixed camera position and consistent front, side and back views. Opportunity: Let the viewer judge a visible difference.

4. When I wouldn't recommend ours.
Shak explains which fit preference the LRGR shape may not suit. Opportunity: Show honest product boundaries rather than claiming universal suitability.

5. The adjustment count.
Track how often a wearer deliberately repositions a hat during a defined period of ordinary use. Opportunity: Turn comfort into an observable question without pretending it is a scientific study.

6. Same hat. Thirty wears later.
Document one hat over genuinely recorded wears and inspect the result. Opportunity: Build a recurring proof series with real continuity.

7. What are you getting for fifty bucks?
Inspect specific product details and explain what they contribute to appearance, fit or use. Opportunity: Explain value without luxury language or attacking competitors. Confirm price first.

8. The detail I was being annoying about.
Shak explains one real product-development decision using an actual sample, revision or reference. Opportunity: Reveal standards and personality through a concrete story. Only viable if the development history is real.

9. One hat. Different heads. No pretending.
Show the same model on several people, recording fit preference and adjustment position. Keep mixed opinions. Opportunity: Create an honest fit-reference series rather than a reaction montage.

10. New versus my own worn one.
Compare a new LRGR hat with a genuinely worn example of the same model. Opportunity: Combine product comparison with real ownership evidence.

WHAT TO AVOID
Generic day-in-the-life videos; unboxings; forced street interviews; fake surprise or scripted customer praise; influencer-style pointing, reactions or transitions; random destruction tests with no useful ownership relevance; founder monologues about the journey without a specific story.
Avoid phrases such as 'more than a brand', 'built different' and 'elevate your style'. Avoid overdone Australian slang, assuming expensive means good or cheap means bad, calling embroidery shots proof of quality without explanation, repeating one comparison with different hooks, and cinematic filler that hides the detail being discussed.

DELIVERABLE 1: DEVELOP THE IDEAS
Create 12 distinct concepts across the three existing pillars.
For each provide:

1. Working title.
2. Content pillar.
3. Specific viewer frustration or question.
4. Core idea in one sentence.
5. Opening visual: exactly what appears in the first two seconds.
6. Suggested opening line: natural speech, not advertising copy.
7. What physically happens in the video.
8. What the viewer can genuinely conclude.
9. Why it suits this brand.
10. What must be confirmed before filming.

Make the concepts meaningfully different in mechanism, not just title. Prioritise visually understandable ideas specific to hats and fit, credible for a founder-led brand, practical to batch shoot, and useful to a potential buyer.

DELIVERABLE 2: CHOOSE THE STRONGEST SIX

Rank six concepts for the first shoot. Explain each choice using strength of opening, visibility of product difference, opportunity to reveal Shak's personality, production feasibility, and evidence or assets required. Do not invent engagement predictions or promise virality.

DELIVERABLE 3: SHOOT-READY EXECUTION PLANS

For each selected concept provide:

A. Creative summary: One short paragraph explaining the idea and intended viewer takeaway.

B. Opening: Opening visual, suggested spoken line and necessary on-screen text.

C. Beat-by-beat structure: Approximate timings appropriate to the idea. For each beat identify what we see, what we hear and what it establishes. Do not stretch every concept to the same duration.

D. Shot list: Essential framing, action and product detail. Distinguish essential shots from optional coverage.

E. Shak's talking prompts: Off-camera questions to help him explain naturally. Suggested phrases are useful, but do not require a memorised polished script.

F. Production requirements: People, hats and comparison products, props, location, and any existing samples, customer comments or wear records needed.

G. Editing direction: Pacing, comparison layout, useful overlays and where continuity matters. Avoid generic instructions such as 'make it engaging'.

H. Ending: Choose a visible result, useful buying takeaway, genuine unresolved test to revisit, relevant product action, or specific audience question. Do not force 'comment below' or 'shop now' onto every video.

I. Integrity check: What the video demonstrates, what it does not demonstrate, and which claims or filming choices could make it misleading.

DELIVERABLE 4: BATCH-SHOOT PLAN

Organise the six concepts into an efficient shoot order. Group shared camera setups, wearers, product close-ups, comparison angles and locations.

Separate content that can be completed in one session, content needing existing evidence, and tests that should begin now and finish later.

If resources are unconfirmed, propose a lean baseline setup and label it as an assumption.

PROOF AND COMPARISON RULES

Do not invent performance, customer comments, founder stories or wear history.

Do not assume waterproofing, sweat resistance, heat resistance or washability.

Confirm care instructions before cleaning tests.

Compare exact products fairly and disclose relevant differences.

Use consistent framing for visual fit comparisons.

Do not deliberately misadjust a competitor's hat.

Keep personal preference distinct from objective measurement. An informal test is not scientific proof.

Do not imply Australian manufacture unless verified.

If a result is unknown, plan to capture the result, not script a win.

OUTPUT STYLE
Be practical, specific and production-minded. Use clear headings and compact tables where useful. Avoid a long marketing-strategy introduction. Start with a short explanation of the strongest creative opportunity, then deliver the ideas, selected executions and shoot plan.
