LRGR THAN LIFE APPAREL

Short form video concepts and shoot plan

Fits around.
Sits down.

PREPARED FOR	PREPARED BY	FORMAT	DATE
Shak	10x Visuals	Reels, TikTok, Shorts	October 2026

THE BIG IDEA

Show the side, not the front.

From the front almost every hat looks fine. The problems people actually talk about show up from the side: it fits around the head but sits up high, they keep pulling it down, and it looks off in the photos their mates take.

So the camera goes where the problem is. A locked side profile, the same head and the same light, and the viewer judges the difference for themselves.

Shak becomes the person who shows you what to look for in a hat. He doesn't have to sell it. He points out what he notices, says what annoys him, and is upfront about who the shape is not for.

One rule runs through everything. Proof over promises. We film the result, whatever it is.

The Hat Test

Real world use with a real outcome.

Built For Us

Who it's for and the decisions behind it.

Side by Side

Fair comparisons in the same frame.

WHAT'S INSIDE

12 concepts · the 6 we'd shoot first · a full plan for each of those 6 · a one day shoot schedule · what we need from you

01 Fits Around. Doesn't Sit Down.

SHOOT 1

On one head, a shallow cap is fitted snug, then loosened, then put next to the LRGR A-frame in profile. It shows that loosening the strap changes how big the hat is around your head, not how deep the crown is.

> FIRST TWO SECONDS
>
> Tight side profile of a cap sitting high, with a clear gap above the ear.
>
> **This fits his head. It just doesn't sit on it.**

THE PROBLEM

It fits. So why does it look wrong?

WHAT HAPPENS

Snug the shallow cap → fixed side shot → loosen two notches (it drops a little and goes loose) → the LRGR hat at the same snug fit, same side shot.

THE VIEWER WALKS AWAY WITH

If your hat sits high, it's crown depth, not size. Loosening won't fix it.

WHY IT FITS LRGR

Turns the most common fit complaint into something you can see in three seconds.

PILLAR

Side by Side

NEEDED FIRST

One shallow comparison cap, and a wearer where the difference actually shows (tested before rolling).

---

02 Same Head. Same Camera. Two Profiles.

SHOOT 1

A locked tripod and tape marks on the floor, one wearer, two hats, front, side and back. Shown as a split screen so the viewer judges the difference.

> FIRST TWO SECONDS
>
> Split screen: the same face in side profile, two different hats.
>
> **Same head, same camera, same spot. Only thing that changes is the hat.**

THE PROBLEM

What does a deeper crown actually look like on a person?

WHAT HAPPENS

The wearer turns 0° / 90° / 180° in hat A, then repeats in hat B. Nothing about the camera or light moves. Both hats are adjusted the way the wearer likes them.

THE VIEWER WALKS AWAY WITH

A clear, fair look at how each hat sits. The viewer picks.

WHY IT FITS LRGR

Proof over promises in its simplest form, and it becomes a repeatable format.

PILLAR

Side by Side

NEEDED FIRST

One comparison cap, named on screen.

03 The Drawer Hat

BUILT FOR US

Someone brings in a hat they bought and stopped wearing. They explain why, Shak looks at the fit, and then they try an LRGR hat. Whatever they think, it stays in.

> FIRST TWO SECONDS
>
> Hands drop a worn cap on the table next to an LRGR hat.
>
> **Alright. Why'd you stop wearing this one?**

THE PROBLEM

I paid for it and it just lives in the drawer.

WHAT HAPPENS

A chat across the table. They put their own hat on and Shak points out what he sees from the side. They swap to LRGR and we film front and side. They give an honest verdict.

THE VIEWER WALKS AWAY WITH

A specific, recognisable reason hats go unworn, and whether a different shape fixes it.

WHY IT FITS LRGR

Starts from a real frustration. Shak's eye for fit comes through naturally.

PILLAR

Built For Us

NEEDED FIRST

Real people with a real unworn hat. The outcome isn't cast.

---

04 Who It's Not For

SHOOT 1

Shak names the fit preferences the LRGR shape won't suit, and shows it on someone who prefers a shallower hat.

> FIRST TWO SECONDS
>
> Shak lifts the LRGR hat off a wearer and hands them a lower cap.
>
> **Honestly? If you like it sitting up top, ours probably isn't it.**

THE PROBLEM

Is a deep A-frame actually right for me?

WHAT HAPPENS

The wearer tries the LRGR hat and Shak points out where it sits differently from what they like. They swap to the shallower cap and explain why they prefer it. Shak says who the LRGR shape is built for.

THE VIEWER WALKS AWAY WITH

Viewers know straight away whether this is their hat.

WHY IT FITS LRGR

A founder saying who shouldn't buy is rare, and it makes everything else Shak says believable.

PILLAR

Built For Us

NEEDED FIRST

A wearer who genuinely prefers a shallow fit, and Shak's real opinion.

05 The Tug Count

HAT TEST

A mate clicks a tally counter every time the wearer reaches up to fix their hat during the same 30-minute everyday routine. One session per hat.

> FIRST TWO SECONDS
>
> Close-up: a thumb clicks a tally counter as a hand tugs a brim.
>
> **Every time he touches it, I click.**

THE PROBLEM

Why am I always pulling my cap down?

WHAT HAPPENS

The same walk, coffee run and drive on two similar days. A wide fixed camera, rules for what counts set before filming, and both tallies revealed at the end.

THE VIEWER WALKS AWAY WITH

An informal, one-person look at how much each hat needs fixing, labelled as exactly that.

WHY IT FITS LRGR

Makes comfort and fit something you can count and watch.

PILLAR

Hat Test

NEEDED FIRST

Two scheduled sessions. The result is whatever it is, even a draw.

---

06 30 Wears. One Hat.

SHOOT 1

One hat, logged on every real wear, inspected at wear 0, 10, 20 and 30 with identical framing.

> FIRST TWO SECONDS
>
> A fresh hat on a turntable, with "WEAR 0 / 30" on screen.
>
> **Wearing this one, nothing else, thirty times. Here's day one.**

THE PROBLEM

What does it look like after I actually wear it?

WHAT HAPPENS

Baseline macros of the brim curve, crown shape, embroidery, sweatband and strap. A quick selfie on each wear day with a dated log. Re-inspected at each checkpoint on the same marks.

THE VIEWER WALKS AWAY WITH

Real ownership evidence, shown over time.

WHY IT FITS LRGR

A recurring series with built-in continuity that gives people a reason to follow.

PILLAR

Hat Test

NEEDED FIRST

A dedicated hat (marked inside), and someone who keeps the wear log.

07 Every Part, What It's For

SHOOT 1

Shak goes through the hat one detail at a time and says what each part does for fit, look or use.

FIRST TWO SECONDS

Macro: a thumb pressing the crown structure from the inside.

Forget the logo for a sec. This is the bit that matters.

THE PROBLEM

What actually makes one cap better than another?

WHAT HAPPENS

Crown depth measured with a tape, brim curve, snapback, 3D embroidery, sweatband, then back on the head in profile. One plain sentence on each.

THE VIEWER WALKS AWAY WITH

What each part of the hat is there for, in plain words.

WHY IT FITS LRGR

Talks about the product the way a maker would, with no luxury language and no digs at anyone else.

PILLAR

Built For Us

NEEDED FIRST

Confirmed materials and measurements.

---

08 The Sample I Sent Back

BUILT FOR US

Shak puts a rejected sample next to the final hat and explains the one detail he wouldn't let go.

FIRST TWO SECONDS

Two near-identical hats, one with tape marking the problem.

Sent this one back. Everyone reckoned I was being picky.

THE PROBLEM

Does anyone actually care about this stuff?

WHAT HAPPENS

Side by side: Shak points at the difference, why it mattered, and what fixing it took.

THE VIEWER WALKS AWAY WITH

The shape came from specific decisions, not a catalogue.

WHY IT FITS LRGR

Shows Shak's standards through one concrete story instead of a founder-journey monologue.

PILLAR

Built For Us

NEEDED FIRST

Only works if a real sample or revision exists.

09 One Hat. Six Heads.

SHOOT 1

The same LRGR hat on 4 to 6 people, with each person's head measurement, strap setting and an honest verdict on screen. Mixed opinions stay in.

FIRST TWO SECONDS

A grid of four side profiles, all in the same hat.

Same hat, six heads. Not everyone was into it.

THE PROBLEM

Will it look like that on me?

WHAT HAPPENS

Each person is measured, puts the hat on, and is filmed in a fixed front and side shot. The strap notch is logged and they give one line on it.

THE VIEWER WALKS AWAY WITH

A real fit reference. Find the head most like yours.

WHY IT FITS LRGR

An honest fit guide that buyers will come back to, not a reaction montage.

PILLAR

Side by Side

NEEDED FIRST

A range of head sizes, and releases that cover showing measurements.

---

10 Brand New vs Mine

SIDE BY SIDE

A new LRGR hat next to Shak's own well-worn one of the same model.

FIRST TWO SECONDS

Two hats on a table, one crisp and one clearly lived in.

This one's new. This one's mine.

THE PROBLEM

Will it hold its shape?

WHAT HAPPENS

Matching macros of the brim, crown, sweatband, embroidery and strap. Then both on the same head in profile.

THE VIEWER WALKS AWAY WITH

How this hat has actually aged under real use.

WHY IT FITS LRGR

Ownership evidence Shak already has, with no staging.

PILLAR

Side by Side

NEEDED FIRST

A genuinely worn hat of the same model, and how long it's been worn.

11 Mirror Says Yes

HAT TEST

A wearer approves a hat in the mirror, then sees the side photo a mate snapped without warning.

> FIRST TWO SECONDS
>
> Front-on mirror shot, the wearer nodding at their reflection.
>
> **Mirror says yes. Now check the side.**

THE PROBLEM

Looked fine in the mirror. Then I saw the photo.

WHAT HAPPENS

Mirror shot in hat A, then a hard cut to the mate's phone photo from the side. Repeat in the LRGR hat at the same angle.

THE VIEWER WALKS AWAY WITH

Always check a hat from the side before you buy it.

WHY IT FITS LRGR

Leads with a buying tip everyone recognises, and the product follows.

PILLAR

Hat Test

NEEDED FIRST

One comparison cap and a willing wearer.

---

12 Three Checks Before You Buy

BUILT FOR US

Shak's quick routine for any hat in any shop: where the brim sits against your brow, the gap above the ear, and the pull-down test.

> FIRST TWO SECONDS
>
> A finger traces the line from brim to ear on a side profile.
>
> **Three things I check on any hat. Doesn't matter whose.**

THE PROBLEM

How do I know before I pay for it?

WHAT HAPPENS

Each check demonstrated on a shallow cap and an LRGR hat. It ends on: "Neither's wrong. Depends how you like it."

THE VIEWER WALKS AWAY WITH

A checklist people can use in any shop.

WHY IT FITS LRGR

Makes Shak the go-to person for hat fit, beyond his own brand.

PILLAR

Built For Us

NEEDED FIRST

Shak's real checks, in his own words.

RECOMMENDATION

Six for the first shoot.

Ranked by how fast the opening reads, how clearly the difference shows on screen, how much of Shak comes through, and how easy it is to film. All six can be shot in one day on one set. It's your call; swap any of them out.

	CONCEPT	WHY IT'S IN	WHAT IT NEEDS
1	**Same Head. Same Camera. Two Profiles.**	Split profile reads instantly. The difference is as visible as it gets. One setup.	One comparison cap
2	**Fits Around. Doesn't Sit Down.**	The gap above the ear is the hook. It explains the problem everyone has. Same set as #1.	One shallow cap, a wearer it shows on
3	**One Hat. Six Heads.**	Grid opener. Real data across head sizes. Shows how Shak handles mixed verdicts.	4 to 6 wearers, a tape
4	**Who It's Not For**	Unexpected from a founder. Shak's honesty is the content.	A wearer who likes a shallow fit
5	**Every Part, What It's For**	Strong macro visuals. Shak talking like a maker. Tabletop, so it's easy.	Confirmed materials and measurements
6	**30 Wears. One Hat.**	Starts a series people follow. Only the baseline gets filmed on the day.	A dedicated hat and a wear log

1

SHOOT PLAN · ~35S · SIDE BY SIDE

Same Head. Same Camera. Two Profiles.

One wearer, one locked camera, two hats, three angles. The viewer sees how each hat sits from the side and back, and decides. Takeaway: judge a hat from the side, not just the front.

OPENING

Split screen: the same face in side profile, two different hats.

Same head, same camera, same spot. Only thing that changes is the hat.

ON SCREEN TEXT

"Same head. Two hats." with small labels naming each hat.

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT SHOWS
0 to 2s	Split side profiles	Opening line	The comparison
2 to 7s	Wide: tripod, tape marks, wearer sitting	"Tripod hasn't moved. He's set both how he likes."	It's fair
7 to 17s	Front A vs B, then side A vs B	Shak on the brim line and the gap above the ear	The difference
17 to 25s	Back A vs B	How far each one comes down at the back	The full picture
25 to 32s	The wearer picks	Their preference and why	Preference, kept honest
32 to 36s	Shak	"Which side looks like how you want it to sit?"	A real question

SHOT LIST

MUST HAVE

- Locked 35mm head-height shots at 0°, 90° and 180°, in both hats
- A wide that proves the camera didn't move
- Both hats adjusted on camera to the wearer's preference

NICE TO HAVE

- 85mm crown macros off the head
- Top-down of both hats side by side

QUESTIONS FOR SHAK (ASKED OFF CAMERA)

- What's the first thing you notice from the side?
- Where's each one sitting against his ears?
- Would you ever wear the other one? When?
- Who'd actually prefer hat A?

EDIT

Stacked split for 9:16, identical scale and grade on both halves. Hold each angle 2s or more. An optional matching guide line at eyebrow height.

ENDING

Audience question: "Which one sits how you like it?" It's genuine, because both answers are valid.

WHAT IT SHOWS

How two specific hats sit on one specific head.

WHAT IT DOESN'T

Comfort, durability, or how they sit on every head.

KEEP IT FAIR

A mismatched lens or crop, or a comparison hat set up to look bad. Name the comparison, and keep the result if the wearer prefers hat A.

2

SHOOT PLAN · ~30S · SIDE BY SIDE

Fits Around. Doesn't Sit Down.

Shows why 'just loosen it' doesn't fix a hat that sits high. Takeaway: circumference and depth are different things, so check the depth.

OPENING

Tight side profile of a cap sitting high, with a clear gap above the ear.

This fits his head. It just doesn't sit on it.

ON SCREEN TEXT

"Fits around ≠ sits down"

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT SHOWS
0 to 3s	Side profile with the gap	Opening line	The problem
3 to 9s	Strap snug, wearer pulls it down, it rides back up	"Snug all the way round."	It fits around
9 to 16s	Loosened two notches, same profile	"Loosen it, drops a bit, but now it's loose."	The usual fix fails
16 to 25s	Back to snug, then the LRGR hat at the same snug fit	"Same fit around. Deeper crown."	The depth difference
25 to 30s	A/B side freeze	"If yours sits like the left, it's depth, not size."	The takeaway

SHOT LIST

MUST HAVE

- Locked 35mm side profile
- 85mm close-up of the strap notches changing
- The hat pulled down and riding back up

NICE TO HAVE

- A tape measuring crown depth on both hats

QUESTIONS FOR SHAK (ASKED OFF CAMERA)

- What do people usually do when a hat sits high?
- Does loosening help? Why not?
- Who does a shallow crown actually suit?

EDIT

A notch overlay ("Notch 4 → Notch 6"). Identical profile framing in every beat, and an optional guide line above the ear.

ENDING

Buying takeaway: "Check depth, not just size."

WHAT IT SHOWS

On this head, loosening didn't bring that cap down meaningfully.

WHAT IT DOESN'T

Every shallow cap, or every head.

KEEP IT FAIR

Over-tightening the comparison. Don't add any 'fits everyone' text.

3

SHOOT PLAN · ~50S · SIDE BY SIDE

One Hat. Six Heads.

A fit reference: the same LRGR hat on 4 to 6 people with measurements and honest verdicts on screen. Takeaway: find the head that's most like yours.

OPENING

A grid of four side profiles, all in the same hat.

Same hat, six heads. Not everyone was into it.

ON SCREEN TEXT

"1 hat · 6 heads · real opinions". Each person gets a card like "58cm · notch 5 · 'Sits right'"

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT SHOWS
0 to 3s	2×2 grid of side profiles	Opening line	The format
3 to 8s each	Tape around the head → hat on → front and side	The wearer's one-liner	Data plus preference
Last 8s	The grid again, labelled	What Shak noticed across them	A pattern, no overclaiming

SHOT LIST

MUST HAVE

- A tape close-up for each person
- A strap-notch close-up
- Locked front and side shots
- The verdict line

NICE TO HAVE

- A group shot
- Shak adjusting a hat on someone

QUESTIONS FOR SHAK (ASKED OFF CAMERA)

- How do you normally like a hat to sit?
- Better or worse than what you usually wear?
- (To Shak) Anyone surprise you?
- Who didn't it suit, and why?

EDIT

Identical framing for every person. Keep the negative verdicts in, and don't save them for a punchline.

ENDING

"Tell me your head size and I'll tell you who's closest." Only if Shak will actually reply. Otherwise end on the grid.

WHAT IT SHOWS

How one model sat on these particular people.

WHAT IT DOESN'T

A universal fit, or long-term comfort.

KEEP IT FAIR

Cutting the negative verdicts, or only picking heads it suits.

4

SHOOT PLAN · ~25S · BUILT FOR US

Who It's Not For

Shak openly says who the LRGR shape isn't for, and shows it. Takeaway: buyers can tell straight away if it's their hat, and they trust everything else Shak says.

OPENING

Shak lifts the LRGR hat off a wearer and hands them a lower cap.

Honestly? If you like it sitting up top, ours probably isn't it.

ON SCREEN TEXT

Captions only.

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT SHOWS
0 to 3s	The swap	Opening line	Honesty first
3 to 12s	Wearer in the LRGR hat, side view, Shak pointing	"See how it comes down over the ears? He doesn't want that."	The limit
12 to 20s	The shallower cap, side view	The wearer on why they prefer it	A different taste, respected
20 to 25s	Shak to camera	"If hats always sit too high on you, that's who ours is for."	Who it IS for

SHOT LIST

MUST HAVE

- The swap
- Both side profiles
- Shak in medium close-up

NICE TO HAVE

- Shak's reaction while the wearer talks

QUESTIONS FOR SHAK (ASKED OFF CAMERA)

- Who's tried your hats and walked away? Why?
- What would you tell a mate who likes it sitting high?
- Ever thought about a shallower version?

EDIT

Few cuts. Let Shak's tone carry it, with no music sting or gotcha edit.

ENDING

Buying takeaway: who it's built for.

WHAT IT SHOWS

Shak's own view of where the hat fits and where it doesn't.

WHAT IT DOESN'T

A measured result.

KEEP IT FAIR

Turning the honesty into a humble-brag. Keep the limit real.

5

SHOOT PLAN · ~40S · BUILT FOR US

Every Part, What It's For

A tabletop breakdown of each part of the hat and what it does. Takeaway: what you're actually getting, in plain words.

OPENING

Macro: a thumb pressing the crown structure from the inside.

Forget the logo for a sec. This is the bit that matters.

ON SCREEN TEXT

One label per detail, e.g. "Crown depth: [measured]cm".

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT SHOWS
0 to 8s	Crown depth with a tape	Why that depth	Fit
8 to 15s	Brim curve	What the curve does	Look
15 to 22s	Snapback and notches	How it adjusts	Fit
22 to 30s	3D embroidery	Why it's raised (look only)	Detail
30 to 36s	Sweatband	What it's for	Wear
36 to 40s	On the head, side view	Closing line	The whole hat

SHOT LIST

MUST HAVE

- An 85mm or macro shot of each detail on a neutral surface
- The tape reading in focus
- One on-head side profile

NICE TO HAVE

- Slider push-ins
- Top-down layout

QUESTIONS FOR SHAK (ASKED OFF CAMERA)

- Why that depth?
- What did you change on the brim?
- What's the 3D embroidery for?
- If you had to cut one thing, what would it be, and what wouldn't you touch?

EDIT

Hold each macro long enough to read the label. No 'premium' or 'luxury' overlays.

ENDING

Product action: "That's the A-frame. Link's there if it's your shape."

WHAT IT SHOWS

The features and what each is meant to do.

WHAT IT DOESN'T

Durability or performance.

KEEP IT FAIR

Saying embroidery proves quality, inventing materials, or knocking other brands.

6

SHOOT PLAN · ~25S (EP. 0) · HAT TEST

30 Wears. One Hat.

The first episode of a documented wear series: today's video is the baseline and the rules. Takeaway: we'll show you, not tell you.

OPENING

A fresh hat on a turntable, with "WEAR 0 / 30" on screen.

Wearing this one, nothing else, thirty times. Here's day one.

ON SCREEN TEXT

"WEAR 0 / 30" (the counter stays the same across every episode).

BEAT BY BEAT

TIME	WE SEE	WE HEAR	IT SHOWS
0 to 4s	Turntable	Opening line	The start
4 to 16s	Baseline macros of the brim, sweatband, embroidery and strap	Shak noting each one	The reference point
16 to 22s	Shak	The rules: one wearer, logged wears, no special care	It's fair
22 to 25s	The hat on	"Check back at ten."	A reason to follow

SHOT LIST

MUST HAVE

- A turntable 360°
- Macros on marked, repeatable framing (note the lens, distance and light)
- Side profile on the head

NICE TO HAVE

- Top-down

QUESTIONS FOR SHAK (ASKED OFF CAMERA)

- What do you reckon goes first?
- What would count as it failing, for you?

EDIT

Identical framing every episode. Later episodes wipe from wear 0 to wear N.

ENDING

A real test still running, with check-ins at 10, 20 and 30.

WHAT IT SHOWS

How one hat holds up under real, logged wear.

WHAT IT DOESN'T

A lab test or every hat.

KEEP IT FAIR

Swapping in a fresh hat, skipping logged wears, or cleaning it without confirmed care instructions.

SHOOT DAY

One day. One set.

Grouped so the camera barely moves. The side profile set is built once and used for four concepts back to back.

8:30 to 10:00	**Tabletop and macro** Every Part, What It's For detail shots. The 30 Wears starting point on the turntable, with framing recorded so every check in matches. Shak only.
10:00 to 12:00	**Locked profile set** Fits Around, Doesn't Sit Down, then Same Head, Two Profiles. One wearer. Camera, light and settings locked and never touched.
12:30 to 2:30	**Same set, more heads** One Hat, Six Heads with wearers in waves, then Who It's Not For with the person who likes a shallower fit.
2:30 to 3:30	**Shak's chair** Questions for all six, pickups, and the rules for the 30 wear series.
3:30 to 4:00	**Outside (optional)** The hat worn naturally, and the first logged wear for the 30 wear series.

Done on the day

Same Head, Two Profiles · Fits Around · Six Heads · Who It's Not For · Every Part

Needs something real

The Sample I Sent Back · Brand New vs Mine · The Drawer Hat

Starts now, pays off later

30 Wears (check ins at 10, 20, 30) · The Tug Count

KIT

One camera with a 35mm (or 24 to 70mm) and an 85mm lens, tripod, two soft LED panels, a plain grey or white wall, lav mic, a stool with tape marks, a soft measuring tape and a tally counter. Shak, one helper, and four to six people with different head sizes.

BEFORE WE FILM

What we need from you.

- [ ] How you're most comfortable on camera: straight to the lens, or answering someone off camera
- [ ] The comparison caps, bought from a shop and named on screen
- [ ] Materials and care instructions, so we only say what's true
- [ ] Whether you have a genuinely worn LRGR hat, and how long you've had it
- [ ] Location for the day
- [ ] Which LRGR hats and colourways go in, and in what sizes
- [ ] Four to six people with a range of head sizes, happy to sign a release
- [ ] Whether a real development sample or rejected version exists
- [ ] Where the hats are made, if it comes up
- [ ] Who wears the 30 wear hat and keeps the log

Results are filmed, not scripted

If the LRGR hat doesn't come out ahead, it stays in. That's what makes the rest believable.

Fair comparisons

Same camera, light and lens. Every hat set the way the wearer likes it.

Preference is not proof

"I like it" and "it measures this" are kept separate. An informal test is called an informal test.

No claims we can't back

No waterproof, sweat or wash claims until they're verified.

NEXT STEP

Pick your six.

Go through the twelve, keep the ones that feel like you and drop the ones that don't. Send Hunter your picks and anything you can tick off the list above, and we'll lock in the shoot day.
